ANNAMACHARYA INSTITUTE OF TECHNOLOGY AND SCIENCES, TIRUPATI
(AUTONOMOUS)

Year: I

Semester: I

Branch of Study: Power systems, EEE.

Course Code	Course Title	L	T	P	Credits
22DPC8201	POWER SYSTEMS ANALYSIS	3	0	0	3

COURSE OUTCOMES

1. Calculate voltage phasors at all buses , given the data using various methods of loadflow
2. Calculate fault currents in each phase
3. Rank various contingencies according to their severity
4. Estimate the bus voltage phasors given various quantities viz. power flow, voltages,taps , CB status etc
5. Estimate closeness to voltage collapse and calculate PV curves using continuationpower flow

UNIT-I

Load flow : Overview of Newton-Raphson, Gauss-Siedel fast decoupled methods, convergence properties, sparsity techniques, handling Qmax violations in constant matrix, inclusion in frequency effects AVR in load flow, handling of discrete variable in load flow.

UNIT-II

Fault Analysis: Simultaneous faults, open conductors faults, generalized method of fault analysis.

UNIT-III

Security Analysis: Security state diagram, contingency analysis, generator shift distribution factors line outage distribution factor, multiple line outages, overload index ranking

UNIT-IV

Power System Equivalent & State Estimation: WARD, REI. equivalents State Estimation Sources of errors in measurement Virtual and Pseudo, Measurement, Observability, Tracking state estimation, WSL method, bad data correction.

UNIT-V

Voltage Stability : Voltage collapse,, P-V curve, multiple power flow solution, continuation power flow, optimal multiplies load flow, voltage collapse proximity indices.

Text Books

(AUTONOMOUS)**

Year: I

Semester: I

Branch of Study: Power Systems , EEE

Course Code	Course Title	L	T	P	Credits
22DPC8202	POWER SYSTEM DYNAMICS-I	3	0	0	3

COURSE OUTCOMES:

1. Understand the modeling of synchronous machine in details.
2. Carry out simulation studies of power system dynamics using MATLAB- SIMULINK, MI-POWER.
3. Carry out stability analysis with and without power system stabilizer (PSS).
4. Understand the load modeling in power system.

UNIT-I

Power system stability states of operation and system security – system dynamics – problems system model analysis of steady State stability and transient stability – simplified representation of Excitation control.

UNIT-II

Synchronous machine – park’s Transformation-analysis of steady state performance per – unit quantities-Equivalent circuits of synchronous machine determination of parameters of equivalent circuits..

UNIT-III

Sub-transient and transient inductance and Time constants, Simplified models of synchronous machines

UNIT-IV

Small signal analysis with block diagram – Representation Characteristic equation and application of Routh Hurwitz criterion- synchronizing and damping torque analysis-small signal model – State equations.

UNIT-V

Excitation systems and Philips-Heffron model, PSS Load modeling, Modeling of Induction Motors, Prime mover controllers.

Year: I

Semester: I

Branch of Study: Power Systems, EEE

Course Code	Course Title	L	T	P	Credits
22DPE8201	RENEWABLE ENERGY SYSTEM	3	0	0	3

COURSE OUTCOMES:

1. Knowledge about renewable energy
2. Understand the working of distributed generation system in autonomous/grid Connected modes
3. Know the Impact of Distributed Generation on Power System

UNIT-I

Introduction, Distributed vs Central Station Generation, Sources of Energy such as Micro-turbines, Internal Combustion Engines.

UNIT-II

Introduction to Solar Energy, Wind Energy, Combined Heat and Power Hydro Energy, Tidal Energy, Wave Energy, Geothermal Energy, Biomass and Fuel Cells.

UNIT-III

Introduction to power electronic devices, AC/DC converters, Pulse width modulation(PWM) and Total harmonic distortion(THD).

UNIT-IV

Power quality management (voltage dips, harmonics and flickers). Frequency management. Influence of WECS on system transient response – IEEE standard and Polices

UNIT-V

Transmission System Operation, Protection of Distributed Generators, Economics of Distributed Generation Case Studies.

Year: I Semester : I Branch of Study: Power Systems,EEE

Course Code	Course Title	L T P	Credits
22DPE8202	SMART GRIDS	3 0 0	3

COURSE OUTCOMES:

1. Appreciate the difference between smart grid & conventional grid
2. Apply smart metering concepts to industrial and commercial installations
3. Formulate solutions in the areas of smart substations ,distributed generation and wide area measurements
4. Come up with smart grid solutions using modern communication technologies

UNIT I

Introduction to Smart Grid, Evolution of Electric Grid, Concept of Smart Grid, Definitions. Need of Smart Grid. Concept of Robust & Self Healing Grid. Present development & International policies in Smart Grid

UNIT II

Introduction to Smart Meters. Real Time Pricing. Smart Appliances. Automatic Meter Reading(AMR). Outage Management System(OMS). Plug in Hybrid Electric Vehicles(PHEV). Vehicle to Grid. Smart Sensors. Home & Building Automation. Smart Substations. Substation Automation. Feeder Automation

UNIT III

Geographic Information System(GIS). Intelligent Electronic Devices(IED) & their application for monitoring & protection. Smart storage like Battery. SMES. Pumped Hydro. Compressed Air Energy Storage. Wide Area Measurement System(WAMS). Phase measurement Unit(PMU)

UNIT IV

Concept of micro-grid. Need & applications of micro-grid, Formation of micro-grid. Issues of Interconnection, Protection & control of micro-grid, Plastic & Organic solar cells, Thin film solar cells, Variable speed wind generators. Fuel-cells, Micro-turbines., Captive power plants. Integration of renewable energy sources.

UNIT V

Power Quality & EMC in Smart Grid. Power Quality issues of Grid connected Renewable Energy Sources. Power Quality Conditioners for Smart Grid. Web based Power Quality monitoring. Power Quality Audit. Advanced Metering Infrastructure (AMI). Home Area Network (HAN), Neighborhood Area, Network (NAN), Wide Area Network (WAN), Bluetooth, ZigBee. GPS, Wi-Fi. Wi-Max based communication. Wireless Mesh Network. Basics of CLOUD Computing & Cyber Security for Smart Grid. Broadband over Powerline (BPL). IP based protocols

Year: I

Semester: I

Branch of Study: Power Systems,EEE

Course Code	Course Title	L	T	P	Credits
22DPE8203	HIGH POWER CONVERTERS	3	0	0	3

COURSE OUTCOMES:

1. Analyze various single phase and three phase power converters.
2. Select and design DC - DC converter topologies for a broad range of power conversion applications.
3. Develop improved power converters for any stringent application requirements.
4. Design AC - AC converters for variable frequency applications.

UNIT I

SINGLE PHASE & THREE PHASE CONVERTERS

Principle of phase controlled converter operation - single-phase full converter and semi-converter (RL,RLE load)- single phase dual converter - Three phase operation fullconverter and semi-converter(R,RL,RLE load) - reactive power - power factorimprovement techniques - PWM rectifiers.

UNIT II

DC-DC CONVERTERS

Limitations of linear power supplies, switched mode power conversion - Non-isolated DC-DC converters: operation and analysis of Buck, Boost, Buck-Boost, Cuk& SEPIC under continuous and discontinuous operation - Isolated converters: basic operation of Flyback.

UNIT III

DESIGN OF POWER CONVERTER COMPONENTS

Introduction to magnetic materials- hard and soft magnetic materials - types of cores, copper windings - Design of transformer - Inductor design equations - Examples of inductor design for buck/flyback converter-selection of output filter capacitors - selection of ratings for devices - input filter design.

UNIT IV

RESONANT DC-DC CONVERTERS

Switching loss, hard switching, and basic principles of soft switching- classification of resonant converters- load resonant converters - series and parallel - resonant switch converters - operation and analysis of ZVS, ZCS converters comparison of ZCS/ZVS - Introduction to ZVT/ZCT PWM converters.

UNIT V

AC-AC CONVERTERS

Principle of on-off and phase angle control - single phase AC voltage controller – analysis with R & RL load - Three phase AC voltage controller - principle of operation of cycloconverter - single phase and three phase Cycloconverters – Introduction to matrix converters.

Year: I

Semester: I

Branch of Study: Power Systems,EEE

Course Code	Course Title	L	T	P	Credits
22DPE8204	WIND AND SOLAR SYSTEMS	3	0	0	3

COURSE OUTCOMES:

1. Appreciate the importance of energy growth of the power generation from the renewable energy sources and participate in solving these problems
2. Demonstrate the knowledge of the physics of wind power and solar power generation and all associated issues so as to solve practical problems
3. Demonstrate the knowledge of physics of solar power generation and the associated issues
4. Identify, formulate and solve the problems of energy crises using wind and solar energy

UNIT-I

Historical development and current status, characteristics of wind power generation, network integration issues.

UNIT-II

Generators and power electronics for wind turbines, power quality standards for wind turbines, Technical regulations for interconnections of wind farm with power systems.

UNIT-III

Isolated wind systems, reactive power and voltage control, economic aspects, Impacts on power system dynamics, power system interconnection.

UNIT-IV

Introduction of solar systems, merits and demerits, concentrators, various applications.

UNIT-V

Solar thermal power generation, PV power generation, Energy Storage device, Designing the solar system for small installations.

Text Books:

1. Thomas Ackermann, Editor, "Wind power in Power Systems", John Willy and sons ltd.2005.
2. Siegfried Heier, "Grid integration of wind energy conversion systems", John Willy and sons ltd.,2006.

Year: I

Semester: I

Branch of Study: Power Systems,EEE

Course Code	Course Title	L	T	P	Credits
22DPE8205	ELECTRIC POWER DISTRIBUTION SYSTEM	3	0	0	3

COURSE OUTCOMES:

1. Knowledge of power distribution system
2. Study of Distribution automation and its application in practice
3. To learn SCADA system

UNIT-I:

Distribution of Power, Management, Power Loads, Load Forecasting Short-term & Long-term, Power System Loading, Technological Forecasting.

UNIT-II:

Advantages of Distribution Management System (D.M.S.) Distribution Automation: Definition, Restoration / Reconfiguration of Distribution Network, Different Methods and Constraints, Power Factor Correction.

UNIT-III:

Interconnection of Distribution, Control & Communication Systems, Remote Metering, Automatic Meter Reading and its implementation

UNIT-IV:

SCADA: Introduction, Block Diagram, SCADA Applied To Distribution Automation. Common Functions of SCADA, Advantages of Distribution Automation through SCADA.

UNIT-V:

Calculation of Optimum Number of Switches, Capacitors, Optimum, Switching Device Placement in Radial, Distribution Systems, Sectionalizing Switches – Types, Benefits, Bellman's Optimality Principle, Remote Terminal Units, Energy efficiency in electrical distribution & Monitoring. Maintenance of Automated Distribution Systems, Difficulties in Implementing Distribution Automation in Actual Practice, Urban/Rural Distribution, Energy Management, AI techniques applied to Distribution Automation

Year: I

Semester: I

Branch of Study: Power Systems,EEE

Course Code	Course Title	L	T	P	Credits
22DPE8206	MATHEMATICAL METHODS FOR POWER ENGINEERING	3	0	0	3

COURSE OUTCOMES:

1. Knowledge about vector spaces, linear transformation, eigen values and eigenvectors of linear operators
2. To learn about linear programming problems and understanding the simplex method for solving linear programming problems in various fields of science and technology
3. Acquire knowledge about nonlinear programming and various techniques used for solving constrained and unconstrained nonlinear programming problems
4. Understanding the concept of random variables, functions of random variable and their probability distribution
5. Understand stochastic processes and their classification

UNIT-I

Vector spaces, subspaces, Linear dependence, Basis and Dimension, Linear transformations, Kernels and Images , Matrix representation of linear transformation, Change of basis, Eigen values and Eigen vectors of linear operator.

UNIT-II

Mathematical formulation of Linear Programming Problems, Simplex Method, Duality in Linear Programming, Dual Simplex method.

UNIT-III

Non Linear Programming preliminaries, Unconstrained Problems ,Search methods , Fibonacci Search, Golden Section Search, Constrained Problems , Lagrange method ,Kuhn-Tucker conditions .

UNIT-IV

Operations on Random Variables, Distributions and Density functions, Moments and Moment generating function, Independent Random Variables, Marginal and Conditional distributions, Conditional Expectation,

UNIT-V

Elements of stochastic processes, Classification of general stochastic processes.

Text Books:

1. Kenneth Hoffman and Ray Kunze, "Linear Algebra", 2nd Edition, PHI, 1992
2. Erwin Kreyszig, "Introductory Functional Analysis with Applications", John Wiley & Sons, 2004

Year: I

Semester: I

Branch of Study: Power Systems, EEE

Course Code	Course Title	L	T	P	Credits
22DPE8207	PULSE WIDTH MODULATION FOR PE CONVERTERS	3	0	0	3

COURSE OUTCOMES:

1. Use the knowledge of PWM techniques in controlling different power electronic converters.
2. Apply the knowledge of power electronics in design and analysis of DC-PWM converters.
3. Design and analyze DC-AC and AC-DC converters and control their operation using PWM techniques.
4. Design and analyze different resonant converters and their control circuits.
5. Analyze AC – AC converters and multilevel converters.

UNIT-I

PWM DC-DC Converters: Analysis of Galvanically Isolated Forward Converter, Boost Converter, Push – Pull (Symmetric) Converters - Analysis of Idealized Circuit in Continuous mode, Output Characteristics, Selection of Components, DC Pre-magnetization of the Core, Half Bridge Converter, Bridge Converter, Hamilton Circuit, Ćuk Converters - Elimination of the Current Ripple, Ćuk Converters with Galvanic Isolation.

UNIT- II

Control Modules: Basic Principles and Characteristics of PWM Control Modules – Circuit Analysis, Simple PWM, Voltage-Controlled PWM, Current-Controlled PWM-Compensated PWM. DC/AC Converters - Inverters: Single-Phase Voltage Inverters - Pulse-Controlled Output Voltage, Pulse-Width Modulated Inverters - Unipolar PWM, Three-Phase Inverters-Over modulation ($m_a > 1$), Asynchronous PWM, Space Vector Modulation - Space Vector Modulation: Basic Principles, Application of Space Vector Modulation Technique, Direct and Inverse Sequencing, Real Drive Influence.

UNIT- III

AC-DC Converters - Rectifiers: Rectifiers with Circuit for Power Factor Correction, Active Rectifier - Active Rectifier with Hysteresis Current Controller, PWM Rectifiers – Advanced Control Techniques of PWM Rectifiers, PWM Rectifier with Current Output, PWM Rectifiers in Active Filters, Some Topologies of PWM Rectifiers, Applications of PWM Rectifiers.

UNIT -IV

Resonant Converters: Resonant Circuits - Resonant Converters of Class D, Series Resonant Converters, Parallel Resonant Converters, Series – Parallel Resonant Converter, Series Resonant Converters Based on GTO Thyristors, Class E Resonant Converters, DC/DC Converters Based on Resonant Switches - ZCS Quasi-resonant Converters, ZVS Quasi-resonant Converters, Multi resonant Converters, ZVS Resonant DC/AC Converters, Soft Switching PWM DC/DC Converters.

(AUTONOMOUS)**

UNIT- V

AC/AC Converters: Single-Phase AC/AC Voltage Converters - Basic Characteristics, Bidirectional Switches, Realization of Input Filter, Current Commutation, Protection of Matrix Converter, Application of Matrix Converter. Introduction to Multilevel Converters: Basic Characteristics -Multilevel DC/DC Converters, Time Interval: $nT < t < nT + DT$, $n = 0, 1, 2$, Time Interval: $nT + DT < t < (n + 1)T$, Multilevel Inverters - Cascaded H-Bridge Inverters, Diode-Clamped Multilevel Inverters, Flying Capacitor Multilevel Inverter.

TEXT BOOKS:

1. D. Grahame Holmes and Thomas A. Lipo “Pulse Width Modulation For Power Converters Principles and Practice” Wiley-IEEE Press 2003.
2. N. Mohan, T. M. Undemand and W. P. Robbins, “Power Electronics: converters,application and design” John Wiley and sons. Wiley India edition, 2006.

Year: I

Semester: I

Branch of Study: Power Systems, EEE

Course Code	Course Title	L	T	P	Credits
22DPE8208	ELECTRIC AND HYBRID VECHILES	3	0	0	3

COURSE OUTCOMES:

1. Acquire knowledge about fundamental concepts, principles, analysis and design of hybrid and electric vehicles.
2. To learn electric drive in vehicles / traction.

UNIT-I

History of hybrid and electric vehicles, Social and environmental importance of hybrid and electric vehicles Impact of modern drive-trains on energy supplies Basics of vehicle performance, vehicle power source characterization Transmission characteristics Mathematical models to describe vehicle performance

UNIT-II

Basic concept of hybrid traction, Introduction to various hybrid drive-train topologies Power flow control in hybrid drive-train topologies Fuel efficiency analysis.

UNIT-III

Introduction to electric components used in hybrid and electric vehicles Configuration and control of DC Motor drives Configuration and control of Introduction Motor drives configuration and control of Permanent Magnet Motor drives Configuration and control of Switch Reluctance Motor drives, drive system efficiency

UNIT-IV

Matching the electric machine and the internal combustion engine(ICE) Sizing the propulsion motor, sizing the power electronics Selecting the energy storage technology Communications, supporting subsystems

UNIT-V

Introduction to energy management and their strategies used in hybrid and electric vehicle Classification of different energy management strategies Comparison of different energy management strategies Implementation issues of energy strategies

Text Books :

1. Sira -Ramirez, R. Silva Ortigoza, "Control Design Techniques in Power Electronics Devices", Springer.
2. Siew-Chong Tan, Yuk-Ming Lai, Chi Kong Tse, "Sliding mode control of switching Power Converters"

Reference Books:

Subject Code	Subject Name	L	T	P	Credits
22MBA0110	Research Methodology and IPR	2	-	-	2

Course Outcomes:

CO1: Get acquainted with basics of research problem formulation

CO2: Familiar with research related information and ethics.

CO3: aware about research report writing and presentation.

CO4: Understand and get knowledge of basic rights for protection of innovative.

CO5: Understand different types of IPRs

Unit 1: Introduction to Research – Types of Research, Meaning of research problem, Sources of research problem, Criteria Characteristics of a good research problem, Errors in selecting a research problem, Scope and objectives of research problem. Approaches to investigation of solutions for research Problem.

Unit 2: Review of Literature and Data Collection - Effective literature studies approaches, analysis, Plagiarism and Research ethics.

Data collection, analysis, interpretation, Necessary instrumentations.

Unit 3: Report Writing - Effective technical writing, how to write report, Paper Developing a Research Proposal, Format of research proposal, a presentation and assessment by a review committee.

Unit 4: Intellectual Property Rights: Nature, Patents, Designs, Trade and Copyright. Process of Patenting and Development: technological research, innovation, patenting, development. International Scenario: International cooperation on Intellectual Property. Procedure for grants of patents, Patenting under PCT.

Unit 5: Patent Rights - Scope of Patent Rights, Licensing and transfer of technology, Patent information and databases, Geographical Indications.

New Developments in IPR: Administration of Patent System. New developments in IPR; IPR of Biological Systems, Computer Software etc. Traditional knowledge Case Studies, IPR and IITs.

Year: I

Semester: I

Branch of Study: Power Systems,EEE

Subject Code	Subject Name	L	T	P	Credits
22DMC9901	English for Research Paper Writing	2	0	0	0

Course Outcomes:

Students will be able to:

1. Improve writing skills and level of readability.
2. Learn what to write in each section, avoiding plagiarism.
3. Understand the review of research literature
4. Apply skills in writing a Title, abstract and literature
5. Learn the skills of drafting Summations

Syllabus

Unit -1	10 hrs
Planning and Preparation, Word Order, Breaking up long sentences, Structuring Paragraphs and Sentences, Being Concise and Removing Redundancy, Avoiding Ambiguity and Vagueness.	
Unit -2	8 hrs
Clarifying Who Did What, Highlighting Your Findings, Hedging and Criticizing, Paraphrasing and Plagiarism, Sections of a Paper, Abstracts, Introduction.	
Unit -3	8 hrs
Review of the Literature, Methods, Results, Discussion, Conclusions, The Final Check.	
Unit – 4	10hrs
Key skills for writing a title – an abstract – an introduction – review of literature	
Unit:5	10 hrs
Key skills for writing methodology – results – discussions – conclusions.

Year: I

Semester: I

Branch of Study: Power Systems, EEE

Subject Code	Subject Name	L	T	P	Credits
22DMC2001	Disaster Management	2	0	0	0

Course Outcomes: At the end of the course, students will be able to

1. Learn to demonstrate a critical understanding of key concepts in disaster risk reduction and humanitarian response.
2. Critically evaluate disaster risk reduction and humanitarian response policy and practice from multiple perspectives.
3. Develop an understanding of standards of humanitarian response and practical relevance in specific types of disasters and conflict situations.
4. Critically understand the strengths and weaknesses of disaster management approaches.
5. Create technological innovations in disaster risk reduction, advantages and problems

UNIT – I

Introduction: Disaster: Definition, Factors and Significance; Difference between Hazard and Disaster; Natural and Manmade Disasters: Difference, Nature, Types and Magnitude.Repercussions of Disasters and Hazards: Economic Damage, Loss of Human and Animal Life, Destruction of Ecosystem. Natural Disasters: Earthquakes, Volcanisms, Cyclones, Tsunamis, Floods, Droughts And Famines, Landslides And Avalanches, Man-made disaster: Nuclear Reactor Meltdown, Industrial Accidents, Oil Slicks And Spills, Outbreaks Of Disease And Epidemics, War And Conflicts.

UNIT – II

Disaster Prone Areas in IndiaStudy Of Seismic Zones; Areas Prone To Floods and Droughts, Landslides andAvalanches; Areas Prone To Cyclonic and Coastal Hazards with Special Referenceto Tsunami; Post-Disaster Diseases and Epidemics

UNIT – III

Disaster Preparedness and Management Preparedness: Monitoring of Phenomena Triggering a Disaster or Hazard; Evaluation of Risk: Application of Remote Sensing, Data from Meteorological and other Agencies, Media Reports: Governmental and Community Preparedness.

UNIT – IV

Risk Assessment Disaster Risk: Concept and Elements, Disaster Risk Reduction, Global And National Disaster Risk Situation. Techniques Of Risk Assessment, Global Co-Operation In Risk Assessment And Warning, People’s Participation In Risk Assessment. Strategies for Survival.

UNIT -V

Disaster Mitigation Meaning, Concept and Strategies of Disaster Mitigation, Emerging Trends In Mitigation. Structural Mitigation and Non-Structural Mitigation, Programs Of Disaster Mitigation In India.

Subject Code	Subject Name	L	T	P	Credits
22DMC9902	Sanskrit for Technical Knowledge	2	0	0	0

Course Outcomes:

Students will be able to

1. Understanding basic Sanskrit language .
2. Ancient Sanskrit literature about science & technology can be understood.
3. Being a logical language will help to develop logic in students.
4. Analytical knowledge in illustrious Sanskrit, the scientific language in the world
5. Technical concepts equipped to explore the huge knowledge

Syllabus

Unit:1

12hrs

Alphabets in Sanskrit - Past/Present/Future Tense - Simple Sentences

Unit:2

12hr

Order - Introduction of roots - Technical information about Sanskrit Literature

Unit:3

12hrs

Technical concepts of Engineering-Electrical, Mechanical, Architecture, Mathematics

Unit:4

12hrs

Sanskrit literature- Harsacaritasangrah – Kumarasambhava -Sabdamanjari

Unit:5

12hrs

Technical concept of Architecture - Manasar text - Logic- Nyaya sutras -pramana-Mathematics – Sulvasutras - Baudhyana theo

Subject Code	Subject Name	L	T	P	Credits
22DMC9903	Value Education	2	0	0	0

Course Outcomes:

Students will be able to

1. Knowledge of self-development
2. Learn the importance of Human values
3. Developing the overall personality
4. Development of spiritual personality
5. Development of emotional personality for efficiency in work

Syllabus

Unit:1

12hrs

Values and self-development - Social values and individual attitudes. Work ethics, Indian vision of humanism. - Moral and non- moral valuation. Standards and principles - Value judgements

Unit:2

12hrs

Importance of cultivation of values - Sense of duty. Devotion, Self-reliance. Confidence, Concentration. Truthfulness, Cleanliness -Honesty, Humanity. Power of faith, National Unity - Patriotism. Love for Nature and Discipline

Unit:3

12hrs

Personality and Behavior Development - Soul and Scientific attitude - Positive Thinking. Integrity and discipline - Punctuality, Love and Kindness - Avoid fault Thinking. Free from anger. Dignity of labour - Universal brotherhood and religious tolerance. True friendship -Happiness Vs suffering, love for truth - Aware of self-destructive habits - Association and Cooperation - Doing best for saving nature

Unit:4

12hrs

Character - Holy books vs Blind faith - Self-management and Good health - Science of reincarnation - Equality, Non-violence, Humility, Role of Women - All religions and same message.

Unit:5

12hrs

Competence - Mind your Mind - Self-control - Honesty - Studying effectively

22DPC8203	POWER SYSTEM STEADY STATE ANALYSIS LAB	0	0	4	2

Course outcomes

1. Calculate voltage phasors at all buses , given the data using various methods of load flow
2. Calculate fault currents in each phase
3. Estimate closeness to voltage collapse and calculate PV curves using continuation power flow

List of the Experiments

1. Transient Stability Studies.
 - (i).Transient and Small Signal Stability Analysis: Single-Machine Infinite Bus System
 - (ii).Transient and Small Signal Stability Analysis: Multi-Machine Power system.
2. Short Circuit Studies.
3. Load Flow Studies
 - (i).Load flow study for a given power system using NR
 - (ii).Load flow study for a given power system using Fast decoupled method.
4. Load Forecasting and Unit Commitment
5. Load-frequency control of a single area power system.
6. Load-frequency control of a two-area power system.

Year: I

Semester: II

Branch of Study: Power Systems,EEE

Course Code	Course Title	L	T	P	Credits
22DPC8205	DIGITAL PROTECTION OF POWER SYSTEM	3	0	0	3

COURSE OUTCOMES:

1. Learn the importance of Digital Relays.
2. Apply Mathematical approach towards protection
3. Learn to develop various Protection algorithms

UNIT-I

Evolution of digital relays from electromechanical relays, Performance and operational characteristics of digital protection, Mathematical background to protection algorithms: Finite difference techniques

UNIT-II

Interpolation formulae: Forward, backward and central difference interpolation , Numerical differentiation, Curve fitting and smoothing, Least squares method, Fourier analysis, Fourier series and Fourier transform, Walsh function analysis

UNIT-III

Basic elements of digital protection: Signal conditioning: transducers, surge protection, analog filtering, analog multiplexers

Conversion subsystem: the sampling theorem, signal aliasing error, sample and hold circuits, multiplexers, analog to digital conversion, Digital filtering concepts, The digital relay as a unit consisting of hardware and software

UNIT-IV

Sinusoidal wave based algorithms: Sample and first derivative (Mann and Morrison) algorithm. Fourier and Walsh based algorithms,

UNIT-V

Fourier Algorithm: Full cycle window algorithm, fractional cycle window algorithm. Walsh function based algorithm, Least Squares based algorithms, Differential equation based algorithms, and Traveling Wave based Techniques, Digital Differential Protection of Transformers, Digital Line Differential Protection, and Recent Advances in Digital Protection of Power Systems

Text books:

Course Code	Course Title	L	T	P	Credits
22DPC8206	POWER SYSTEM DYNAMICS-II	3	0	0	3

COURSE OUTCOMES:

1. Gain valuable insights into the phenomena of power system including obscure ones.
2. Understand the power system stability problem.
3. Analyze the stability problems and implement modern control strategies.
4. Simulate small signal and large signal stability problems.

UNIT-I

Basic Concepts of Dynamic Systems and Stability Definition Small Signal Stability (Low Frequency Oscillations) of Unregulated and Regulated System.

UNIT-II

Effect of Damper, Flux Linkage Variation and AVR 8 Large Signal Rotor Angle Stability Dynamic Equivalents And Coherency, Direct Method of Stability Assessment Stability Enhancing Techniques, Mitigation Using Power System Stabilizer.

UNIT-III

Asynchronous Operation and Resynchronization Multi-Machine Stability.

UNIT-IV

Dynamic Analysis of Voltage Stability, Voltage Instability and Collapse, Causes of Voltage Collapse and Improvement methods of Voltage Stability.

UNIT-V

Frequency Stability, Automatic Generation Control, Primary and Secondary Control Sub-Synchronous Resonance and Counter Measures.

Year: I	Semester: II	Branch of Study: Power Systems,EEE			
Course Code	Course Title	L	T	P	Credits
22DPE8209	RESTRUCTURED POWER SYSTEMS	3	0	0	3

COURSE OUTCOMES:

1. Learners will have knowledge on restructuring of power industry.
2. Learners will attain knowledge about locational margin prices and financial.
3. Learners will understand basics of congestion management.

UNIT I

INTRODUCTION TO RESTRUCTURING OF POWER INDUSTRY

Introduction: Deregulation of power industry, Restructuring process, Issues involved in deregulation, Deregulation of various power systems – Fundamentals of Economics: Consumer behavior, Supplier behavior, Market equilibrium, Short and long run costs, Various costs of production – Market models: Market models based on Contractual arrangements, Comparison of various market models, Electricity vis – a – vis other commodities, Market architecture, Case study.

UNIT II

TRANSMISSION CONGESTION MANAGEMENT

Introduction: Definition of Congestion, reasons for transfer capability limitation, Importance of congestion management, Features of congestion management – Classification of congestion management methods – Calculation of ATC - Non – market methods – Market methods – Nodal pricing – Inter zonal and Intra zonal congestion management – Price area congestion management – Capacity alleviation method.

UNIT III

LOCATIONAL MARGINAL PRICES AND FINANCIAL TRANSMISSION RIGHTS

Mathematical preliminaries: - Locational marginal pricing– Lossless DCOPF model for LMP calculation – Loss compensated DCOPF model for LMP calculation – ACOPF model for LMP calculation – Financial Transmission rights – Risk hedging functionality -Simultaneous feasibility test and revenue adequacy – FTR issuance process: FTR auction, FTR allocation – Treatment of revenue shortfall – Secondary trading of FTRs – Flow gate rights – FTR and market power - FTR and merchant transmission investment.

UNIT IV

ANCILLARY SERVICE MANAGEMENT AND PRICING OF TRANSMISSION NETWORK

Introduction of ancillary services – Types of Ancillary services – Classification of Ancillary services – Load generation balancing related services – Voltage control and reactive power support devices – Black start capability service - How to obtain ancillary service –Co-optimization of energy and reserve services - Transmission pricing – Principles – Classification – Rolled in transmission pricing methods – Marginal transmission pricing paradigm – Composite pricing paradigm – Merits and demerits of different paradigm.

**ANNAMACHARYA INSTITUTE OF TECHNOLOGY AND SCIENCES, TIRUPATI
(AUTONOMOUS)**

UNIT V

REFORMS IN INDIAN POWER SECTOR

Introduction – Framework of Indian power sector – Reform initiatives - Availability based tariff – Electricity act 2003 – Open access issues – Power exchange – Reforms in the near future

Text Books:

1. Mohammad Shahidehpour, Muwaffaq Alomoush, Marcel Dekker, “Restructured electrical power systems: operation, trading and volatility” Pub., 2001.

Year: I

Semester: II

Branch of Study: Power Systems, EEE

Course Code	Course Title	L	T	P	Credits
22DPE8210	ADVANCED DIGITAL SIGNAL PROCESSING	3	0	0	3

COURSE OUTCOMES:

1. Knowledge about the time domain and frequency domain representations as well analysis of discrete time signals and systems
2. Study the design techniques for IIR and FIR filters and their realization structures.
3. Acquire knowledge about the finite word length effects in implementation of digital filters.
4. Knowledge about the various linear signal models and estimation of power spectrum of stationary random

Unit-I

Discrete time signals, Linear shift invariant systems, Stability and causality, Sampling of continuous time signals, Discrete time Fourier transform- Discrete Fourier series- Discrete Fourier, transform Z transform- Properties of different transforms.

Unit-II

Linear convolution using DFT, Computation of DFT Design of IIR digital filters from analog filters, Impulse invariance method, Bilinear transformation method.

Unit-III

FIR filter design using window functions, Comparison of IIR and FIR digital filters, Basic IIR and FIR filter realization structures, Signal flow graph representations Quantization process and errors, Coefficient quantisation effects in IIR and FIR filters.

Unit-IV

A/D conversion noise- Arithmetic round-off errors , Dynamic range scaling, Overflow oscillations and zero input limit cycles in IIR filters, Linear Signal Models.

Unit-V

All pole, All zero and Pole-zero models Power spectrum estimation- Spectral analysis of deterministic signals, Estimation of power spectrum of stationary random signals. Optimum linear filters Optimum signal estimation, Mean square error estimation, Optimum FIR and IIR Filters.

Text Books:

1. Sanjit K Mitra, "Digital Signal Processing: A computer-based approach", Tata Mc Grow-Hill Edition 1998

Year: I

Semester: II

Branch of Study: Power Systems, EEE

Course Code	Course Title	L	T	P	Credits
22DPE8211	DYNAMICS OF ELECTRICAL MACHINES	3	0	0	3

COURSE OUTCOMES:

1. Formulation of Electrodynamics equations of all electric machines and analyze the performance characteristics
2. Knowledge of transformations for the dynamic analysis of machines
3. Knowledge of determination of stability of the machines under small signal and transient conditions
4. Study about synchronous machine

UNIT-I

Stability, Primitive 4 Winding Commutator Machine, Commutator Primitive Machine, Complete Voltage Equation of Primitive 4 Winding Commutator Machine.

UNIT-II

Torque Equation Analysis of Simple DC Machines using the Primitive Machine Equations, The Three Phase Induction Motor, Transformed Equations, Different Reference Frames for Induction Motor Analysis Transfer Function Formulation.

UNIT-III

Three Phase Salient Pole Synchronous Machine, Parks Transformation, Steady State Analysis.

UNIT-IV

Large Signal Transient, Small Oscillation Equations in State Variable form, Dynamical Analysis of Interconnected Machines, Large Signal Transient Analysis using Transformed Equations

UNIT-V

DC Generator / DC Motor System, Alternator / Synchronous Motor System.

Text Books:

1. D.P. Sengupta & J.B. Lynn, "Electrical Machine Dynamics", The Macmillan Press Ltd. 1980
2. R Krishnan "Electric Motor Drives, Modeling, Analysis, and Control", Pearson Education., 2001

Year: I

Semester: II

Branch of Study: Power Systems, EEE

Course Code	Course Title	L T P	Credits
22DPE8212	POWER APPARATUS DESIGN	3 0 0	3

COURSE OUTCOMES:

1. To give a systematic approach for modeling and analysis of all rotating machines
Under both transient and steady state conditions with the dimensions and material used
2. Ability to model and design all types of rotation machines including special machines

UNIT I

Principles of Design of Machines -Specific loadings, choice of magnetic and 8 electric loadings Real and apparent flux densities, temperature rise calculation, dimension for DC machines, Induction machines and synchronous machines, Design of Transformers-General considerations, output equation, emf per turn, choice of flux density and current density, main dimensions, leakage reactance and conductor size, design of tank and cooling

UNIT II

Specific loadings, choice of magnetic and electric loadings Real and apparent flux 8 - densities, temperature rise calculation Separation of main dimension for DC machines, Induction machines and synchronous machines, Heating and cooling of machines, types of ventilation, continuous and intermittent, rating

UNIT III

Calculation of losses, efficiency and regulation, Forces winding during short circuit, Choice of specific electric and magnetic loadings, efficiency, power factor, Number of slots in stator and rotor, Elimination of harmonic torques

UNIT IV

Design of stator and rotor winding, slot leakage flux squirrel cage rotor, Leakage reactance, equivalent resistance of squirrel cage rotor, Magnetizing current, efficiency from design data

UNIT V

Types of alternators, comparison, specific loadings, output co-efficient, design of main dimensions. Introduction to Computer Aided Electrical Machine Design Energy efficient machines

Text Books:

1. Clayton A.E, "The Performance and Design of D.C. Machines", Sir I. Pitman & sons, Ltd.
2. M.G. Say, "The Performance and Design of A.C. Machines ", Pitman.

Year: I

Semester: II

Branch of Study: Power Systems, EEE

Course Code	Course Title	L	T	P	Credits
22DPE8213	ADVANCED MICRO-CONTROLLER BASED SYSTEMS	3	0	0	3

COURSE OUTCOMES:

- 1.To learn how to program a processor in assembly language and develop an advanced processor based system.
- 2 .To learn configuring and using different peripherals in a digital system.
- 3 .To compile and debug a Program.
- 4 .To generate an executable file and use it.

UNIT-I

Basic Computer Organization, Accumulator based processes-Architecture-Memory Organization-I/O Organization

UNIT-II

Micro-Controllers-Intel 8051, Intel 8056- Registers, Memories.I/O Ports, Serial Communication. Timers, Interrupts, Programming.

UNIT-III

Intel 8051 – Assembly language programming-Addressing-Operations Stack & Subroutines, Interrupts-DMA.

UNIT-IV

PIC 16F877- Architecture Programming, Interfacing Memory/ I/O Devices, Serial I/O and data communication

UNIT-V

Digital Signal Processor (DSP) - Architecture – Programming, Introduction to FPGA Microcontroller development for motor control applications.

Stepper motor control using micro controller, Microcontroller development for motor control applications. Stepper motor control using micro controller.

Text Books:

1. Stuart A. Boyer: “SCADA-Supervisory Control and Data Acquisition”, Instrument Society of America Publications, USA,2004.

(AUTONOMOUS)**

Year: I Semester: II Branch of Study: Power Systems,EEE

Course Code	Course Title	L	T	P	Credits
22DPE8214	SCADA SYSTEM AND APPLICATIONS	3	0	0	3

COURSE OUTCOMES:

1. Describe the basic tasks of Supervisory Control Systems (SCADA) as well as their typical applications.
2. Acquire knowledge about SCADA architecture, various advantages and disadvantages of each system.
3. Knowledge about single unified standard architecture IEC 61850.
4. To learn about SCADA system components: remote terminal units, PLCs, intelligent electronic devices, HMI systems, SCADA server.
5. Learn and understand about SCADA applications in transmission and distribution sector, industries etc.

UNIT-I

Introduction to SCADA: Data acquisition systems, Evolution of SCADA, Communication technologies.

UNIT-II

Monitoring and supervisory functions, SCADA applications in Utility, Automation, Industries SCADA.

UNIT-III

Industries SCADA System Components: Schemes- Remote Terminal Unit (RTU), Intelligent Electronic Devices (IED), Programmable Logic Controller (PLC), Communication Network, SCADA Server, SCADA/HMI Systems

UNIT-IV

SCADA Architecture: Various SCADA architectures, Advantages and Disadvantages of each system - single unified standard architecture -IEC 61850.

UNIT-V

SCADA Communication: various industrial communication technologies -wired and wireless methods and fiber optics. open standard communication protocols.

SCADA Applications: Utility applications- Transmission and Distribution sector-operations, monitoring, analysis and improvement. Industries - oil, gas and water

Text Books:

1. Stuart A. Boyer: "SCADA-Supervisory Control and Data Acquisition", Instrument Society of America Publications, USA, 2004.

Year: I

Semester: II

Branch of Study: Power Systems,EEE

Course Code	Course Title	L	T	P	Credits
22DPE8215	ARTIFICIAL INTELLIGENCE TECHNIQUES	3	0	0	3

COURSE OUTCOMES:

1. Learn the concepts of biological foundations of artificial neural networks
2. Learn Feedback networks and radial basis function networks and fuzzy logics
3. Identifications of fuzzy and neural network
4. Acquire the knowledge of GA

UNIT-I

Biological foundations to intelligent Systems, Artificial Neural Networks, Single layer and Multilayer Feed Forward NN, LMS and Back Propagation Algorithm, Feedback networks and Radial Basis Function Networks.

UNIT-II

Fuzzy Logic, Knowledge Representation and Inference Mechanism, Defuzzification Methods

UNIT-III

Fuzzy Neural Networks, some algorithms to learn the parameters of the network like GA, System Identification using Fuzzy and Neural Network.

UNIT-IV

Genetic algorithm, Reproduction cross over, mutation, Introduction to evolutionary program.

UNIT-V

Applications of above mentioned techniques to practical problems.

Text Books:

- 1.J M Zurada , “An Introduction to ANN”,Jaico Publishing House
2. Simon Haykins, “Neural Networks”, Prentice Hall

Year: I

Semester: II

Branch of Study: Power Systems,EEE

Course Code	Course Title	L	T	P	Credits
22DPE8216	POWER QUALITY	3	0	0	3

COURSE OUTCOMES:

1. Acquire knowledge about the harmonics, harmonic introducing devices and effect of harmonics on system equipment and loads
2. Develop analytical modeling skills needed for modeling and analysis of harmonics in networks and components
3. To introduce the student to active power factor correction based on static VAR compensators and its control techniques
4. To introduce the student to series and shunt active power filtering techniques for harmonics.

UNIT-I

Introduction-power quality-voltage quality-overview of power Quality phenomena classification of power quality issues, Power quality measures and standards-THD-TIF-DIN-C-message weights, Flicker factor transient phenomena-occurrence of power quality problems, Power acceptability curves-IEEE guides, Standards and recommended practices.

UNIT-II

Harmonics-individual and total harmonic distortion RMS value of a harmonic waveform, Triplex harmonics. Important harmonic introducing devices. SMPS, Three phase power converters-arcing devices saturable devices, Harmonic distortion of fluorescent lamps-effect of power system harmonics on power system equipment and loads.

UNIT-III

Modeling of networks and components under non-sinusoidal conditions, Transmission and distribution systems, Shunt capacitors-transformers, Electric machines, Ground systems loads that cause power quality problems, Power quality problems created by drives and its impact on drive.

UNIT-IV

Power factor improvement- Passive Compensation, Passive Filtering, Harmonic Resonance. Impedance Scan Analysis, Active Power Factor Corrected Single Phase Front End Control.

UNIT-V

Methods for Single Phase APFC, Three Phase APFC and Control Techniques, PFC based on Bilateral Single Phase and Three Phase Converter.

Text Books:

1. G.T. Heydt, "Electric power quality", McGraw-Hill Professional, 2007
2. Math H. Bollen, "Understanding Power Quality Problems", IEEE Press, 2000

Reference Books:

Semester: II

Branch of Study: Power Systems, EEE

Course Code	Course Title	L	T	P	Credits
22DMC9904	CONSTITUTION OF INDIA	3	0	0	3

Course Outcomes: Students will be able to:

1. Discuss the growth of the demand for civil rights in India for the bulk of Indians before the arrival of Gandhi in Indian politics.
2. Discuss the intellectual origins of the framework of argument that informed the conceptualization of social reforms leading to revolution in India.
3. Discuss the circumstances surrounding the foundation of the Congress Socialist Party [CSP] under the leadership of Jawaharlal Nehru and the eventual failure of the proposal of direct elections through adult suffrage in the Indian Constitution.
4. Discuss the Powers and functions of Governor, President, Judiciary.
5. Discuss the functions of local administration bodies

Syllabus

Unit :1

4hrs

History of Making of the Indian Constitution - History Drafting Committee, (Composition & Working).

Unit :2

8hrs

Philosophy of the Indian Constitution - Preamble Salient Features.

Unit :3

8hrs

Contours of Constitutional Rights & Duties - Fundamental Rights - Right to Equality- Right to Freedom - Right against Exploitation - Right to Freedom of Religion - Cultural and Educational Rights - Right to Constitutional Remedies - Directive Principles of State Policy - Fundamental Duties.

Unit :4

8hrs

Organs of Governance - Parliament - Composition - Qualifications and Disqualifications - Powers and Functions - Executive •President •Governor - Council of Ministers - Judiciary, Appointment and Transfer of Judges, Qualifications - Powers and Functions

Unit :5

8hrs

Local Administration - District's Administration head: Role and Importance - Municipalities: Introduction, Mayor and role of Elected Representative, CEO of Municipal Corporation- Pachayati raj: Introduction, PRI: ZillaPachayat - Elected officials and their roles, CEO Zilla Panchayat: Position and role - Block level: Organizational Hierarchy (Different departments) - Village level: Role of Elected and Appointed officials - Importance of grass root democracy.

Suggested books for reading:

1. The Constitution of India, 1950 (Bare Act), Government Publication.
 2. Dr. S. N. Busi, Dr. B. R. Ambedkar framing of Indian Constitution, 1st Edition, 2015.
 3. M. P. Jain, Indian Constitution Law, 7th Edn., Lexis Nexis, 2014.
- D.D. Basu, Introduction to the Constitution of India, Lexis Nexis, 2015.

Year: I

Semester: II

Branch of Study: Power Systems,EEE

Subject Code	Subject Name	L	T	P	Credits
22DMC5801	Pedagogy Studies	2	0	0	0

Course Outcomes:

1. Understand the concept, nature, characteristics of growth and development
2. Appreciate the contribution of the school and society on various aspects of development.
3. Update their knowledge about the personality development.
4. Understand the concept and process of teaching-learning.
5. Understand the concept and importance of individual differences.

UNIT – I

Introduction and Methodology:

Aims and rationale, Policy background, Conceptual framework and, terminology, Theories of learning, Curriculum, Teacher education, Conceptual framework, Research questions, Overview of methodology and Searching.

UNIT II

Thematic overview: Pedagogical practices are being used by teachers in formal and informal classrooms in developing countries. Curriculum, Teacher education.

UNIT III

Evidence on the effectiveness of pedagogical practices, Methodology for the in depth stage: quality assessment of included studies. How can teacher education (curriculum and practicum) and the school curriculum and guidance materials best support effective pedagogy? Theory of change, Strength and nature of the body of evidence for effective pedagogical practices. Pedagogic theory and pedagogical approaches. Teachers' attitudes and beliefs and Pedagogic strategies.

UNIT IV

Professional development: alignment with classroom practices and follow-up support, Peer support, Support from the head teacher and the community. Curriculum and assessment, Barriers to learning: limited resources and large class sizes

UNIT V

Research gaps and future directions, Research design, Contexts, Pedagogy, Teacher education, Curriculum and assessment, Dissemination and research impact.

Semester: II

Branch of Study: Power Systems, EEE

Subject Code	Subject Name	L	T	P	Credits
22DMC9905	Stress Management by Yoga	2	0	0	0

Course Outcomes:

Students will be able to:

1. Develop healthy mind in a healthy body thus improving social health also
2. Improve efficiency
3. Understanding the role of yoga in mental hygiene
4. Develop strong mental health
5. Understand the role of yoga in stress management

Syllabus

Unit: 1 **10hrs**

Definitions of Eight parts of yoga. (Ashtanga)

Unit:2 **12hrs**

Yam and Niyam - Do`s and Don`t`s in life - Ahinsa, Satya, Astheya, Bramhacharya and Aparigraha - Shaucha, Santosh, Tapa, Swadhyay, Ishwarpranidhan

Unit:3 **12hrs**

Asan and Pranayam - Various yoga poses and their benefits for mind & body - Regularization of breathing techniques and its effects - Types of pranayam.

Unit:4 **15hrs**

Mental Hygiene and Yoga - Mental health: A Yogic Perspective - Mental hygiene and role of Yoga in mental hygiene - Yogic principles for the management of stress (Prayer and meditation for mental health).

Unit:5 **12hrs**

Yogic Management of Stress: Specific practices for stress management: Yogasana, Breath awareness, Shvasana, Yoganidra, Pranayama and Meditation

Suggested Books

1. ‘Yogic Asanas for Group Training-Part-I’ :Janardan Swami Yogabhyasi Mandal, Nagpur
2. “Rajayoga or conquering the Internal Nature” by Swami Vivekananda, AdvaitaAshrama (Publication Department), Kolkata

3. Correlation of COs with the POs for M.Tech

22DMC9906	PERSONALITY DEVELOPMENT THROUGH LIFE ENLIGHTENMENT SKILLS	2	0	0	0

Course Outcomes:

Students will be able to

1. Study of Shrimad-Bhagwad-Geeta will help the student in developing his personality and achieve the highest goal in life
2. The person who has studied Geeta will lead the nation and mankind to peace and prosperity
3. Study of Neetishatakam will help in developing versatile personality of students.
4. Understand their Personality and achieve their highest Goals of Life.
5. Learn to build Positive Attitude, Self-Motivation, enhancing Self-Esteem and Emotional Intelligence

Syllabus

Unit – 1

10hrs

Neetisatakam-Holistic development of personality - Verses- 19,20,21,22 (wisdom) - Verses- 29,31,32 (pride & heroism) - Verses- 26,28,63,65 (virtue) - Verses- 52,53,59 (dont's) - Verses- 71,73,75,78 (do's).

Unit – 2

10hrs

Neetisatakam-Holistic development of personality - Verses- 26,28,63,65 (virtue) - Verses- 52,53,59 (dont's) - Verses- 71,73,75,78 (do's).

Unit – 3

10hrs

Approach to day to day work and duties - Shrimad Bhagwad Geeta - Chapter 2-Verses 41, 47,48 - Chapter 3-Verses 13, 21, 27, 35 - Chapter 6-Verses 5,13,17, 23, 35, - Chapter 18-Verses 45, 46, 48.

Unit:4

10hrs

Statements of basic knowledge – Shrimad Bhagwad Geeta - Chapter2-Verses 56, 62, 68
Chapter 12 -Verses 13, 14, 15, 16,17, 18.

Unit:5

10hrs

Personality of Role model - Shrimad Bhagwad Geeta - Chapter2 - Verses 17, Chapter 3-Verses 36, 37, 42 - Chapter 4 - Verses 18, 38, 39 - Chapter18 – Verses 37, 38, 63

Suggested for reading

1. “Srimad Bhagavad Gita” by Swami SwarupanandaAdvaita Ashram (Publication Department), Kolkata.
2. Bhartrihari’s Three Satakam (Niti-sringar-vairagya) by P.Gopinath, Rashtriya Sanskrit Sansthanam, New Delhi.

Course Code	Course Title	L	T	P	Credits
22DPC8207	POWER SYSTEM PROTECTION LAB	0	0	4	2

COURSE OUTCOMES:

1. Analyze the protection of parallel, radial feeders & over voltage induction relay
2. Understand the principle of Reverse Power protection
3. Analyze the functioning of over voltage induction relay & Differential Relay

LIST OF THE EXPERIMENTS:

1. Apply a relay for phase sequence, phase failure and voltage asymmetry to a three-phase circuit
2. To use a timer with different time functions to extend the protection relays operation
3. Modeling of Differential Relay using MATLAB
4. Radial Feeder Protections
5. Parallel Feeder Protections
6. Principle of Reverse Power Protection
7. Differential Protection of Transformer
8. To the study time Vs voltage characteristics of over voltage induction relay

Semester: I

Branch of Study: Power Systems, EEE

Course Code	Course Title	L	T	P	Credits
22DPE8218	FACTS AND CUSTOM POWER DEVICES	3	0	0	3

COURSE OUTCOMES:

1. Acquire knowledge about the fundamental principles of Passive and Active Reactive Power Compensation Schemes at Transmission and Distribution level in Power Systems.
2. Learn various Static VAR Compensation Schemes like Thyristor/GTO Controlled Reactive Power Systems; PWM Inverter based Reactive Power Systems and their controls.
3. To develop analytical modeling skills needed for modeling and analysis of such Static VARS systems.

UNIT I

Reactive power flow control in Power Systems, Control of dynamic power unbalances in Power System, Power flow control -Constraints of maximum transmission line loading, Benefits of FACTS Transmission line compensation, Uncompensated line -Shunt compensation, Series compensation, Phase angle control, Reactive power compensation, Shunt and Series compensation principles, Reactive compensation at transmission and distribution level .

UNIT II

Static versus passive VAR compensator, Static shunt compensators: SVC and STATCOM, Operation and control of TSC, TCR and STATCOM, Compensator control, Comparison between SVC and STATCOM.

UNIT III

Static series compensation: TSSC, SSSC, Static voltage and phase angle regulators TCVR and TCPAR Operation and Control, Applications, Static series compensation GCSC, TSSC, TCSC and Static synchronous series compensators and their Control.

UNIT IV

SSR and its damping Unified Power Flow Controller: Circuit Arrangement, Operation and control of UPF, Basic Principle of P and Q control- Independent real and reactive power flow control, Applications.

UNIT V

Introduction to interline power flow controller, Modeling and analysis of FACTS Controllers, Simulation of FACTS controllers Power quality problems in distribution systems, harmonics, Loads that create harmonics, modeling, harmonic propagation, series and parallel resonances, mitigation of harmonics, passive filters, active filtering hunt , series and hybrid and their control.

Text Books:

1. K R Padiyar, "FACTS Controllers in Power Transmission and Distribution", New Age International Publishers, 2007.
2. X P Zhang, C Rehtanz, B Pal, "Flexible AC Transmission Systems- Modelling and Control", Springer Verlag, Berlin, 2006.

3. N.G. Hingorani, L. Gyugyi, "Understanding FACTS: Concepts and Technology of Flexible AC Transmission Systems", IEEE Press Book, Standard Publishers and Distributors, Delhi, 2001.

Reference Books:

1. K. S. Sureshkumar, S.Ashok , "FACTS Controllers & Applications", E-book edition, Nalanda Digital Library, NIT Calicut, 2003.
2. G. T. Heydt, "Power Quality", McGraw-Hill Professional, 2007.
3. T. J. E. Miller, "Static Reactive Power Compensation", John Wiley and Sons, Newyork, 1982.

Year: II

Semester: I

Branch of Study: Power Systems, EEE

Course Code	Course Title	L	T	P	Credits
22DPE8219	INDUSTRIAL LOAD MODELING AND CONTROL	3	0	0	3

COURSE OUTCOMES:

1. Know about load control techniques in industries and its application
2. Learn different types of industrial processes and optimize the process using tools like LINDO and LINGO
3. Apply load management to reduce demand of electricity during peak time
4. Apply different energy saving opportunities in industries

UNIT-I

Electric Energy Scenario-Demand Side Management-Industrial Load Management. Load Curves-Load Shaping Objectives-Methodologies-Barriers. Classification of Industrial Loads- Continuous and Batch processes, Load Modelling

UNIT-II

Electricity pricing – Dynamic and spot pricing –Models. Direct load control- Interruptible load control. Bottom up approach- scheduling- Formulation of load models.Optimization and control algorithms.

UNIT-III

Reactive power management in industries-controls. Power quality impacts-application of filters Energy saving in industries.

UNIT-IV

Cooling and heating loads, Load profiling- Modeling, Cool storage-Types-Control strategies, Optimal operation, Problem formulation.

UNIT-V

Captive power units-Operating and control strategies, Power Pooling- Operation models, Energy banking, Industrial Cogeneration, Selection of Schemes- Optimal Operating Strategies-Peak load saving, Constraints. Integrated Load management for Industries.

Text Books:

1. C.O. Bjork " Industrial Load Management - Theory, Practice and Simulations", Elsevier, the Netherlands,1989
2. C.W. Gellings and S.N. Talukdar, . Load management concepts. IEEE Press, New York, 1986,pp. 3-28

(Levels of Correlation, viz., 1.Low, 2.Moderate, 3.High)

Course Code	Course Title	L	T	P	Credits
22DPE8220	DYNAMICS OF LINEAR SYSTEMS	3	0	0	3

COURSE OUTCOMES:

1. To learn linear system modeling, analysis and design so as to obtain the ability to apply the same to engineering problems in a global perspective.
2. Knowledge on carrying out detailed stability analysis of both linear and nonlinear systems
3. Design observers and controllers for linear systems
4. Acquire knowledge of discrete time linear systems modeling, analysis and design
5. Develop and utilize modern software tools for analysis and design of linear continuous and Discrete time systems.

UNIT- I

State variable representations of system, transfer function and transfer function matrix, solutions of state equations.

UNIT- II

Observability and controllability, minimal realization of MIMO systems, analysis of linear time varying systems, the concepts of stability.

UNIT -III

Lyapunov stability analysis, Lyapunov function and its properties, controllability by state variable feedback.

UNIT- IV

Ackerman's Formula - stabilisation by output feedback , asymptotic observers for state measurement, observer design.

UNIT- V

State space representation of discrete systems, solution of state equations, controllability and observability, stability analysis using Lyapunov method, State feedback of linear discrete time systems, design of observers - MATLAB Exercises

Text Books:

1. Thomas Kailath, "Linear Systems", Prentice Hall Inc., Englewood Cliffs, N.J. 1980.
2. K. Ogata, "State Space Analysis of Control Systems", Prentice Hall Inc., Englewood Cliffs, N.J., 1965.

Year: II

Semester: I

Branch of Study: Power Systems, EEE

Course Code	Course Title	L	T	P	Credits
22DOE2001	Waste to Energy	3	0	0	3

Course Outcomes: At the end of the course, students will be able to

1. Able to classify types of wastes
2. Understand the method of pyrolysis
3. Understand the use and application of Biomass gasifiers
4. Design biomass combustors
5. Analyze the properties of Biogas

Unit-I:

Introduction to Energy from Waste: Classification of waste as fuel – Agro based, Forest residue, Industrial waste - MSW – Conversion devices – Incinerators, gasifiers, digestors

Unit-II:

Biomass Pyrolysis: Pyrolysis – Types, slow fast – Manufacture of charcoal – Methods - Yields and application – Manufacture of pyrolytic oils and gases, yields and applications.

Unit-III:

Biomass Gasification: Gasifiers – Fixed bed system – Downdraft and updraft gasifiers – Fluidized bed gasifiers – Design, construction and operation – Gasifier burner arrangement for thermal heating – Gasifier engine arrangement and electrical power – Equilibrium and kinetic consideration in gasifier operation.

Unit-IV:

Biomass Combustion: Biomass stoves – Improved chullahs, types, some exotic designs, Fixed bed combustors, Types, inclined grate combustors, Fluidized bed combustors, Design, construction and operation - Operation of all the above biomass combustors.

Unit-V:

Biogas: Properties of biogas (Calorific value and composition) - Biogas plant technology and status - Bio energy system - Design and constructional features - Biomass resources and their classification - Biomass conversion processes - Thermo chemical conversion - Direct combustion - biomass gasification - pyrolysis and liquefaction - biochemical conversion - anaerobic digestion - Types of biogas Plants – Applications - Alcohol production from biomass - Bio diesel production - Urban waste to energy conversion - Biomass energy programme in India.

Year: II

Semester: I

Branch of Study: Power Systems, EEE

Course Code	Course Title	L	T	P	Credits
22DOE2002	Project Management	3	0	0	3

Course Outcomes: At the end of the course, students will be able

1. To understand the importance of project management and organization
2. To apply theoretical and practical aspects of project management planning techniques to achieve project goals.
3. To understand the resources, cost and accounts managements
4. To know about the project implementation, and contract management and procurement management
5. Understand to apply knowledge and skills of quality and safety managements in construction.

UNIT I

Introduction to Project management: Characteristics of projects, Definition and objectives of Project Management, Stages of Project Management, Project Planning Process, Establishing Project organization.

UNIT-II

Project Planning: Planning techniques- Bar Chart, Gantt Charts- Networks: basic terminology, preparation of CPM-computation of float values, critical paths-PERT- Determination of three time estimates- Comparison between CPM and PERT

UNIT-III

Resources Management: Flow chart of Resources Management, Labour's requirement, Factors behind the selection of equipment, Material Management- flow chart and functions. Cost and Accounts Management: Cost-volume relationship-Basic Cost Control System- Principle of accounting, Account process, Balance sheet.

Unit IV

Project Implementation: Project Monitoring and Control with PERT/Cost, Computers applications in Project Management, Contract Management, Project Procurement Management.

UNIT-V

Quality management

Inspection, quality control and quality assurance in projects- Cost of quality, cost versus quality levels- ISO standards- benefits-ISO 9001-2000 family of standards- Audit- types, ISO 9001-2000 for internal audit.

Safety management

Cause for accident in construction site- Principle of safety- Role of safety personnel's - General safety conditions

Year: II Semester: I Branch of Study: Power Systems, EEE

Course Code	Course Title	L	T	P	Credits
22DOE9001	Industrial Safety	3	0	0	3

Course Outcomes:

- CO: 1 Analyze the basics of industrial safety.
- CO: 2 Understand the Fundamentals of maintenance engineering
- CO: 3 Apply the methods of prevention of corrosion and wear.
- CO: 4 Understand the Fault tracing and their applications.
- CO: 5 Understand the methods of preventive measures and maintenance

Unit I

Industrial safety: Accident, causes, types, results and control, mechanical and electrical hazards, types, causes and preventive steps/procedure, describe salient points of factories act 1948 for health and safety, wash rooms, drinking water layouts, light, cleanliness, fire, guarding, pressure vessels, etc, Safety color codes. Fire prevention and firefighting, equipment and methods

Unit II

Fundamentals of maintenance engineering: Definition and aim of maintenance engineering, Primary and secondary functions and responsibility of maintenance department, Types of maintenance, Types and applications of tools used for maintenance, Maintenance cost & its relation with replacement economy, Service life of equipment.

Unit III

Wear and Corrosion and their prevention: Wear- types, causes, effects, wear reduction methods, lubricants-types and applications, Lubrication methods, general sketch, working and applications, i. Screw down grease cup, ii. Pressure grease gun, iii. Splash lubrication, iv. Gravity lubrication, v. Wick feed lubrication vi. Side feed lubrication, vii. Ring lubrication, Definition, principle and factors affecting the corrosion. Types of corrosion, corrosion prevention methods.

Unit IV

Fault tracing: Fault tracing-concept and importance, decision tree concept, need and applications, sequence of fault finding activities, show as decision tree, draw decision tree for problems in machine tools, hydraulic, pneumatic, automotive, thermal and electrical equipment's like, i. Any one machine tool, ii. Pump iii. Air compressor, iv. Internal combustion engine, v. Boiler, vi. Electrical motors, Types of faults in machine tools and their general causes.

Unit V

Periodic and preventive maintenance: Periodic inspection-concept and need, degreasing, cleaning and repairing schemes, overhauling of mechanical components, overhauling of electrical motor, common troubles and remedies of electric motor, repair complexities and its use, definition, need, steps and advantages of preventive maintenance. Steps/procedure for periodic and preventive maintenance of: i. Machine tools, ii. Pumps, iii. Air compressors, iv. Diesel generating (DG) sets, Program and schedule of preventive maintenance of mechanical and electrical equipment, advantages of preventive maintenance. Repair cycle concept and importance.

Year: II

Semester: I

Branch of Study: Power Systems, EEE

Course Code	Course Title	L	T	P	Credits
22DOE9002	Operations Research	3	0	0	3

Course Outcomes:

CO: 1 Understand the characteristics and phases, types of models, allocation in linear programming

CO: 2 Apply the concept of optimal solution, unbalanced problem, degeneracy and Transportation problem & sequencing.

CO: 3 Understand the concept of replacement of items and related problems, theory of games related problems

CO: 4 Apply the concept of the knowledge of queuing models, inventory management models.

CO: 5 Apply the knowledge of dynamic programming, the concept of the simulation and simulation languages.

Unit I

Optimization Techniques, Model Formulation, models, General L.R Formulation, Simplex Techniques, Sensitivity Analysis, Inventory Control Models

Unit II

Formulation of a LPP - Graphical solution revised simplex method - duality theory – dual simplex method - sensitivity analysis - parametric programming.

Unit III

Nonlinear programming problem - Kuhn-Tucker conditions min cost flow problem - max Flowproblem - CPM/PERT

Unit IV

Scheduling and sequencing - single server and multiple server models - deterministic Inventorymodels - Probabilistic inventory control models - Geometric Programming.

Unit V

Competitive Models, Single and Multi-channel Problems, Sequencing Models, Dynamic Programming, Flow in Networks, Elementary Graph Theory, Game Theory Simulation

Course Code	Course Title	L	T	P	Credits
22DOE5801	BUSINESS ANALYTICS	3	0	0	3

Course Outcome:

After completion of the course, students will be able to

1. Ability to work with different data types.
2. Ability to solve various problems related to businesses.
3. Ability to effectively utilize the time and involve in collaborative tasks.
4. Able to evaluate strategic objectives that enhance organizational effectiveness and operational performance.
5. Able to demonstrate collaboration for effective leadership and decision making.

Unit I

Business Analysis: Overview of Business Analysis, Overview of Requirements, Role of the Business Analyst. Stakeholders: the project team, management, and the front line, Handling Stakeholder Conflicts.

Unit II

Life Cycles: Systems Development Life Cycles, Project Life Cycles, Product Life Cycles, Requirement Life Cycles. Forming Requirements: Overview of requirements Attributes of Good Requirements, Types of Requirements, Requirement Sources, Gathering Requirements from Stakeholders, Common Requirements Documents.

Unit III

Transforming Requirements: Stakeholder Needs Analysis, Decomposition Analysis, Additive/Subtractive Analysis, Gap Analysis, Notations (UML & BPMN), Flowcharts, Swim Lane Flowcharts, Entity-Relationship Diagrams, State- Transition Diagrams, Data Flow Diagrams, Use Case Modeling, Business Process Modeling

Unit IV

Finalizing Requirements: Presenting Requirements, Socializing Requirements and Gaining Acceptance, Prioritizing Requirements. Managing Requirements Assets: Change Control, Requirements Tools

Unit V

Recent Trends in: Embedded and collaborative business intelligence, Visual data recovery, Data Storytelling and Data Journalism.

Year: II

Semester: I

Branch of Study: Power Systems, EEE

Course Code	Course Title	L	T	P	Credits
22DOE9004	Composite Materials	3	0	0	3

Course Outcomes:

CO: 1 Understanding of basic concepts and characteristics of geometric and physical applications of composites.

CO: 2 Explain different reinforcements and their properties.

CO: 3 Study of micromechanics and properties of composite material.

CO: 4 Study of coordinate transformations of stress and strain laws.

CO: 5 Study of elastic behaviour of unidirectional composites; Joining Methods and Failure Theories

UNIT-I

Introduction: Definitions, Composites, Reinforcements and matrices, Types of reinforcements, Types of matrices, Types of composites, Carbon Fibre composites, Properties of composites in comparison with standard materials,

Reinforcements: Fibres- Glass, Silica, Kevlar, carbon, boron, silicon carbide, and boron carbide fibres. Particulate composites, Polymer composites, Thermoplastics, Thermosets, Metal matrix and ceramic composites.

UNIT-II

Manufacturing methods :

Hand and spray lay - up, injection molding, resin injection, filament winding, pultrusion, centrifugal casting and prepregs. Fibre/Matrix Interface, mechanical.

Measurement of interface strength. Characterization of systems; carbon fibre/epoxy, glass fibre/polyester, etc.

UNIT-III

Micromechanics: Unidirectional composites, constituent materials and properties, elastic properties of a lamina, properties of typical composite materials, laminate characteristics and configurations. Characterization of composite properties.

Mechanical Testing: Determination of stiffness and strengths of unidirectional composites; tension, compression, flexure and shear.

UNIT-IV

Coordinate transformations: Hooke's law for different types of materials, Hooke's law for two dimensional unidirectional lamina, Transformation of stress and strain, Numerical examples of stress strain transformation, Graphic interpretation of stress – strain relations. Off - axis, stiffness modulus, off - axis compliance.

UNIT-V

Elastic behavior of unidirectional composites: Elastic constants of lamina, relationship between engineering constants and reduced stiffness and compliances, analysis of laminated composites, constitutive relations

Joining Methods and Failure Theories: Joining –Advantages and disadvantages of adhesive and mechanically fastened joints. Typical bond strengths and test procedures.
