| <b>Pre-Requisites</b>  | <b>DATA STRUCTURES</b>  |
| <b>Course Objectives:</b>  |   |
| <b>The course aims to:</b>   |   |
| <ul style="list-style-type: none"> <li>Introduce fundamental data structures including linked lists, stacks, queues, trees, graphs, dictionaries, and hashing techniques.</li> <li>Develop algorithmic skills for designing and analyzing searching, sorting, and traversal methods.</li> <li>Teach implementation of priority queues, binary search trees, and balanced trees (AVL, Red-Black, Splay, B-Trees).</li> <li>Enable students to select and apply appropriate data structures for solving computational problems efficiently.</li> <li>Foster understanding of the performance analysis and comparative evaluation of data structures and algorithms.</li> </ul> |   |
| <b>Course Outcomes (CO):</b> Student will be able to   |   |
| <b>CO1</b>   | <b>Understand</b> the dynamic memory allocation to implement and manipulate linear data structures like linked lists, stacks, and queues. |
| <b>CO2</b>   | <b>Analyze</b> the different sorting and searching techniques, to arrange data efficiently and compare their performance.                 |
| <b>CO3</b>   | <b>Create</b> the dictionaries and hashing for efficient data storage and retrieval.  |
| <b>CO4</b>   | <b>Apply</b> the operations on trees and priority queues, including insertion, deletion, and traversal.                                   |
| <b>CO5</b>   | <b>Apply</b> the balanced search trees for efficient data access and storage.   |

| CO  | Action Verb | Knowledge Statement                              | Condition   | Criteria  | Blooms Level |
|-----|-------------|--|---|---|--------------|
| CO1 | Understand  | the Dynamic memory allocation                    |   | to implement and manipulate linear data structures like linked lists, stacks, and queues. | L2           |
| CO2 | Analyze     | d the iffereent sorting and searching techniques |   | to arrange data efficiently and compare their performance.                                | L4           |
| CO3 | Create      | the dictionaries and hashing                     |   | for efficient data storage and retrieval.   | L6           |
| CO4 | Apply       | the operations                                   | on trees and priority queues, including insertion, deletion, and traversal. |   | L3           |
| CO5 | Apply       | the balanced search trees                        |   | for efficient data access and storage.  | L3           |

|   |                                 |       |
|---|---------------------------------|-------|
| <b>UNIT – I</b>   | <b>Introduction</b>             | 8 Hrs |
| Introduction to Data Structures, Singly Linked Lists, Doubly Linked Lists, Circular Lists-Algorithms. Stacks and Queues: Algorithm Implementation using Linked Lists.   |                                 |       |
| <b>UNIT – II</b>  | <b>Searching and Sorting:</b>   | 9 Hrs |
| Linear and Binary, Search Methods, Sorting: -Basic sorting techniques, Radix Sort, Bucket Sort, Shell Sort Trees- Binary trees, Properties, Representation and Traversals, Expression Trees (Infix, prefix, postfix). Graphs-Basic Concepts, Storage structures and Traversals.                         |                                 |       |
| <b>UNIT – III</b>   | <b>Dictionaries and Hashing</b> | 9 Hrs |
| Dictionaries: Definition, Dictionary Abstract Data Type, Implementation of Dictionaries.<br>Hashing: Review of Hashing, Hash Function, Collision Resolution Techniques in Hashing, Separate Chaining, Open Addressing, Linear Probing, Quadratic Probing, Double Hashing, Rehashing, Extendible Hashing |                                 |       |
| <b>UNIT – IV</b>  | <b>Priority queues</b>          | 8 Hrs |
| Definition, ADT, Realizing a Priority Queue Using Heaps, Definition, Insertion, Deletion .Search Trees- Binary Search Trees, Definition, ADT, Implementation, Operations-Searching, Insertion, Deletion.  |                                 |       |
| <b>UNIT – V</b>   | <b>Search Trees</b>             | 9 Hrs |
| AVL Trees, Definition, Height of AVL Tree, Operations-, Insertion, Deletion and Searching, Introduction to Red-Black and Splay Trees, B-Trees, Height of B-Tree, Insertion, Deletion and Searching, Comparison of Search Trees.   |                                 |       |

|  |  |       |
|--|--|-------|
| <b>UNIT – I</b>  | <b>Introduction to Distributed Systems</b>           | 8 Hrs |
| <p>Architectures of Distributed Systems, System Architecture types, issues in distributed operating systems, communication networks, communication primitives. Theoretical Foundations, inherent limitations of a distributed system, lamp ports, logical clocks, vector clocks, casual ordering of messages, global state, cuts of a distributed computation, termination detection. Distributed Mutual Exclusion, introduction, the classification of mutual exclusion and associated algorithms, a comparative performance analysis</p>   |  |       |
| <b>UNIT – II</b>   | <b>Distributed Systems Deadlock &amp; algorithms</b> | 9 Hrs |
| <p>Distributed Deadlock Detection, Introduction, deadlock handling strategies in distributed systems, issues in deadlock detection and resolution, control organizations for distributed deadlock detection, centralized and distributed deadlock detection algorithms, hierarchical deadlock detection algorithms. Agreement protocols, introduction-the system model, a classification of agreement problems, solutions to the Byzantine agreement problem, and applications of agreement algorithms. Distributed resource management: introduction-architecture, mechanism for building distributed file systems design issues, log structured file systems</p> |  |       |

|  |  |        |
|--|--|--------|
| <b>UNIT – III</b>  | <b>Distributed Shared memory, Database &amp; Recovery</b>      | 8 Hrs  |
| Distributed shared memory, Architecture, algorithms for implementing DSM, memory coherence and protocols, design issues. Distributed Scheduling, introduction, issues in load distributing, components of a load distributing algorithm, stability, load distributing algorithm, performance comparison, selecting a suitable load sharing algorithm, requirements for load distributing, task migration and associated issues. Failure Recovery and Fault tolerance: introduction, basic concepts, classification of failures, backward and forward error recovery, backward error recovery, recovery in concurrent systems, consistent set of check points, synchronous and asynchronous check pointing and recovery, check pointing for distributed data base systems, recovery in replicated distributed databases |  |        |
| <b>UNIT – IV</b>   | <b>Protection, Security, Cryptography &amp; Authentication</b> | 8 Hrs  |
| Protection and security, preliminaries, the access matrix model and its implementations. -safetyin matrix model, advanced models of protection. Data security, cryptography: Model of cryptography, conventional cryptography modern cryptography, private key cryptography, data encryption standard public key cryptography, multiple encryptions, authentication in distributed systems   |  |        |
| <b>UNIT – V</b>  | <b>Multiprocessor OS &amp; Concurrency control</b>             | 10 Hrs |
| Multiprocessor operating systems, basic multiprocessor system architectures, inter connection networks for multiprocessor systems, caching hypercube architecture. Multiprocessor Operating System, structures of multiprocessor operating system, operating system design issues, threads, process synchronization and scheduling.<br>Concurrency control model of database systems, the problem of concurrency control, serializability theory, distributed database systems, concurrency control algorithms, introduction, basic synchronization primitives, lock-based algorithms, time stamp-based algorithms, optimistic algorithms, concurrency control algorithms, data replication.   |  |        |

|  |  |        |
|--|--|--------|
| <b>UNIT – I</b>  | <b>DATA ANALYTICS LIFE CYCLE</b>                         | 8 Hrs  |
| Introduction to Big data Business Analytics - State of the practice in analytics role of data scientists - Key roles for successful analytic project - Main phases of life cycle - Developing core deliverables for stakeholders.  |  |        |
| <b>UNIT – II</b>   | <b>STATISTICS</b>  | 10 Hrs |
| Sampling Techniques - Data classification, Tabulation, Frequency and Graphic representation - Measures of central value - Arithmetic mean, Geometric mean, Harmonic mean, Mode, Median, Quartiles, Deciles, Percentile - Measures of variation – Range, IQR, Quartile deviation, Mean deviation, standard deviation, coefficient variance, skewness, Moments & Kurtosis. |  |        |
| <b>UNIT – III</b>  | <b>PROBABILITY AND HYPOTHESIS TESTING</b>                | 8 Hrs  |
| Random variable, distributions, joint probability function, marginal density function. Random vectors - Some special probability distribution - Binomial, Poison, Geometric, uniform, exponential, normal, gamma and Erlang - Normal distribution  |  |        |
| <b>UNIT – IV</b>   | <b>PREDICTIVE ANALYTICS</b>                              | 9 Hrs  |
| Sampling distribution – Estimation - point, confidence - Test of significance, 1& 2 tailed test, uses of t-distribution, F-distribution, $\chi^2$ distribution - Predictive modeling and Analysis - Regression Analysis, Correlation analysis, Rank correlation coefficient, Multiple correlation. .   |  |        |
| <b>UNIT – V</b>  | <b>TIME SERIES FORECASTING AND DESIGN OF EXPERIMENTS</b> | 9 Hrs  |
| Forecasting Models for Time series: MA, SES, TS with trend, season - Design of Experiments, one way classification, two-way classification, ANOVA, Latin square, Factorial Design.   |  |        |

**Pre-Requisites**      **DATA STRUCTURES AND ALGORITHMS**

**Course Objectives:**

- To introduce students to the implementation of linear and non-linear data structures using linked representation.
- To provide practical knowledge on stack and queue operations and their applications in problem solving.
- To enable students to implement tree structures and perform operations like traversal, insertion, deletion, and balancing.
- To develop skills in implementing searching and sorting techniques to improve problem-solving efficiency.
- To expose students to advanced data structures such as AVL Trees, B-Trees, and Hashing for efficient storage and retrieval.
- To enhance the ability to design, test, and analyze algorithms for graph traversal and dictionary

**Course Outcomes (CO):** Student will be able to

|            |   |
|------------|---|
| <b>CO1</b> | <b>Apply</b> the linear linked lists to perform insertion, deletion, searching, and traversal.        |
| <b>CO2</b> | <b>Create</b> the stack and queue using linked lists to solve expression processing problems          |
| <b>CO3</b> | <b>Analyze</b> the tree and graph structures using recursive and iterative methods                    |
| <b>CO4</b> | <b>Analyze</b> the searching and sorting techniques for efficiency.                                   |
| <b>CO5</b> | <b>Apply</b> the hashing techniques for efficient dictionary implementation and collision resolution. |

| <b>CO</b> | <b>Action Verb</b> | <b>Knowledge Statement</b>  | <b>Condition</b> | <b>Criteria</b>   | <b>Blooms level</b> |
|-----------|--------------------|---|------------------|---|---------------------|
| CO1       | <b>Apply</b>       | the linear linked lists to perform insertion, deletion, searching, and traversal. |                  |   | L3                  |
| CO2       | <b>Create</b>      | the stack and queue using linked lists  |                  | to solve expression processing problems                           | L6                  |
| CO3       | <b>Analyze</b>     | the tree and graph structures using recursive and iterative methods               |                  |   | L4                  |
| CO4       | <b>Analyze</b>     | the searching and sorting techniques  |                  | for efficiency  | L4                  |
| CO5       | <b>Apply</b>       | the hashing techniques  |                  | for efficient dictionary implementation and collision resolution. | L3                  |

**List of Topics:**

**Program 1:**  
Write a program to perform various operations on single linked list **(CO1)**

**Program 2:**  
Write a program for the following **(CO1)**

- Reverse a linked list
- Sort the data in a linked list
- Remove duplicates
- Merge two linked lists

**Program 3:** Write a program to perform various operations on doubly linked list. **(CO1)**

**Program 4:** Write a program to perform various operations on circular linked list. **(CO1)**

**Program 5:** Write a program for performing various operations on stack using linked list. **(CO2)**

**Program 6:** Write a program for performing various operations on queue using linked list. **(CO2)**

**Program 7:** Write a program for the following using stack **(CO2)**

- Infix to postfix conversion.
- Expression evaluation.

**Program 8:** Write a program to implement various operations on Binary Search Tree Using Recursive and Non-Recursive methods. **(CO3)**

**Program 9:** Write a program to implement the following for a graph. a) BFS b) DFS (CO3)

**Program 10:** Write a program to implement various Sorting Techniques (CO4)

**Program 11:** Write a program to implement various Searching Techniques (CO4)

**Program 12:** Write a program to implement various operations on AVL trees. (CO4)

**Program 13:** Write a program to perform the following operations: (CO5)

a) Insertion into a B-tree

b) Searching in a B-tree

**Program 14:** Write a program to implement all the functions of Dictionary (ADT) using Hashing. (CO5)

**List of Programs:**

**Unit I: Architectures & Synchronization (CO1)**

1. Implementation of Lamport's Logical Clocks – Simulate logical clock updates in a distributed system.
2. Vector Clocks and Causal Ordering – Implement vector clocks and analyze message ordering.
3. Distributed Mutual Exclusion Algorithms – Implement Ricart-Agrawala and Maekawa's mutual exclusion algorithms.

**Unit II: Deadlock Detection & Resource Management (CO2)**

4. Simulation of Distributed Deadlock Detection Algorithms – Implement centralized and distributed deadlock

|  |
|--|
| <p>detection techniques.</p> <p>5. Hierarchical Deadlock Detection – Implement a hierarchical approach to detecting deadlocks in a distributed system.</p> <p><b>Unit III: Shared Memory, Scheduling &amp; Fault Tolerance (CO3)</b></p> <p>6. Implementation of Load Balancing Algorithms – Compare load balancing techniques (static and dynamic).</p> <p>7. Task Migration Mechanism – Implement and analyze task migration in a distributed system.</p> <p><b>Unit IV: Security &amp; Cryptography (CO4)</b></p> <p>8. Access Matrix Model Implementation – Simulate access control using an access matrix.</p> <p>9. Implementation of Data Encryption Standard (DES) Algorithm – Encrypt and decrypt messages using DES.</p> <p>10. Public Key Cryptography using RSA – Implement RSA encryption and authentication mechanisms.</p> <p><b>Unit V: Multiprocessor &amp; Database OS (CO5)</b></p> <p>11. Process Synchronization in Multiprocessor Systems – Implement and analyze thread synchronization.</p> <p>12. Concurrency Control using Lock-Based Algorithms – Implement two-phase locking protocol.</p> <p>13. Timestamp-Based Concurrency Control – Develop a timestamp-based concurrency control mechanism.</p> <p>14. Optimistic Concurrency Control Algorithm – Implement an optimistic concurrency control protocol.</p> |

|-----------------|---|--------------|
| <b>UNIT – I</b> | <b>FUNDAMENTALS OF RESEARCH METHODOLOGY</b> | <b>8 Hrs</b> |
|-----------------|---|--------------|

Overview of research process and design - Types of Research - Approaches to Research ( Qualitative vs Quantitative) - Observation studies, Experiments and Surveys - Use of Secondary and exploratory data to answer the research question - Importance of Reasoning in Research and Research ethics - Documentation Styles (APA/IEEE etc.) - Plagiarism and its consequences

**Learning Outcomes**

- Recall key concepts of the research process, including different types and approaches to research, and the importance of ethics.
- Differentiate between qualitative and quantitative research approaches and the various uses of secondary data.
- Identify the core principles of research design and ethics, including plagiarism and documentation styles.
- Explain the significance of reasoning and ethical conduct in all stages of the research process.
- Apply knowledge of different documentation styles, such as APA and IEEE, to properly cite sources and avoid plagiarism.

|                  |                                    |               |
|------------------|------------------------------------|---------------|
| <b>UNIT – II</b> | <b>DATA COLLECTION AND SOURCES</b> | <b>10 Hrs</b> |
|------------------|------------------------------------|---------------|

Importance of Data Collection - Types of Data - Data Collection Methods - Data Sources - primary, secondary and Big Data sources - Data Quality & Ethics - Tools and Technology for Data Collection

**Learning Outcomes**

- Identify different types of data and the various methods for collecting both primary and secondary data.
- Explain the importance of data quality and ethical considerations in data collection.

|  |   |       |
|--|---|-------|
| <ul style="list-style-type: none"> <li>• Differentiate between primary, secondary, and Big Data sources.</li> <li>• Describe the various tools and technologies used for effective data collection.</li> </ul>   |   |       |
| Analyze the ethical implications of data collection and ensure data quality in a research study.   |   |       |
| <b>UNIT – III</b>  | <b>DATA ANALYSIS AND REPORTING</b>                | 8 Hrs |
| <p>Overview of Multivariate analysis - Experimental research, cause-effect relationship, and development of hypotheses- Measurement systems analysis, error propagation, and validity of experiments - Guidelines for writing abstracts, introductions, methodologies, results, and discussions - Writing Research Papers &amp; proposals</p> <p><b>Learning Outcomes</b></p> <ul style="list-style-type: none"> <li>• Apply knowledge of multivariate analysis and experimental research to develop hypotheses and analyze data.</li> <li>• Explain the process of measurement systems analysis and error propagation in experimental design.</li> <li>• Formulate clear and concise abstracts, introductions, and methodologies for research papers.</li> <li>• Write effective results and discussion sections based on data analysis.</li> </ul> |   |       |
| Develop comprehensive research papers and proposals based on proper data analysis and reporting guidelines.  |   |       |
| <b>UNIT – IV</b>   | <b>UNDERSTANDING INTELLECTUAL PROPERTY RIGHTS</b> | 9 Hrs |
| <p>Intellectual Property – The concept of IPR, Evolution and development of concept of IPR, IPR development process, Trade secrets, utility Models, IPR &amp; Bio diversity, Role of WIPO and WTO in IPR establishments, Right of Property, Common rules of IPR practices, Types and Features of IPR Agreement, Trademark, Functions of UNESCO in IPR maintenance.</p> <p><b>Learning Outcomes</b></p> <ul style="list-style-type: none"> <li>• Recall the fundamental concepts of Intellectual Property (IP) and its evolution.</li> <li>• Describe the roles of organizations like <b>WIPO</b> and <b>WTO</b> in the establishment of IPR.</li> <li>• Differentiate between various types of IPR, including trade secrets and trademarks.</li> <li>• Explain the common rules and features of IPR agreements and the role of UNESCO.</li> </ul>    |   |       |
| Analyze the relationship between IPR and biodiversity, and its broader impact.   |   |       |
| <b>UNIT – V</b>  | <b>PATENTS</b>                                    | 9 Hrs |
| <p>Patents – objectives and benefits of patent, Concept, features of patent, Inventive step, Specification - Types of patent application, process E-filing, Examination of patent, Grant of patent, Revocation, Equitable Assignments, Licenses, Licensing of related patents, patent agents, Registration of patent agents</p> <p><b>Learning Outcomes</b></p> <ul style="list-style-type: none"> <li>• Explain the objectives, benefits, and key features of a patent, including the concept of an inventive step.</li> <li>• Differentiate between the various types of patent applications and the e-filing process.</li> <li>• Describe the process of patent examination, grant, and revocation.</li> <li>• Identify the roles of patent agents and the process for their registration.</li> </ul>   |   |       |
| Analyze the concepts of equitable assignments, licenses, and licensing of related patents.   |   |       |

**Course Outcomes:**

After Studying the Course Student will able to

|   |  |
|---|--|
| <b>Pre-Requisites</b>   | Java Script  |
| <b>Course Objectives:</b>   |  |
| <ul style="list-style-type: none"> <li>• Provide strong foundations in web development technologies (HTML, CSS, JavaScript, ES6).</li> <li>• Introduce server-side programming with Node.js and Express.js for building scalable applications.</li> <li>• Enable students to work with relational (MySQL) and non-relational (MongoDB) databases.</li> <li>• Impart skills to design and develop interactive user interfaces using ReactJS.</li> <li>• Enhance problem-solving abilities through full-stack web application development experiments.</li> </ul> |  |
| <b>Course Outcomes (CO):</b> Student will be able to  |  |
| <b>CO1</b>  | <b>Apply</b> the HTML and CSS concepts to design structured and visually attractive web pages.                   |
| <b>CO2</b>  | <b>Analyze</b> the JavaScript and ES6 features to create interactive and asynchronous client-side applications.  |
| <b>CO3</b>  | <b>Apply</b> the Node.js and Express.js to develop server applications handling HTTP requests efficiently.       |
| <b>CO4</b>  | <b>Analyze</b> the SQL and NoSQL databases to select suitable storage solutions for applications.                |
| <b>CO5</b>  | <b>Apply</b> the React components, state management, and conditional rendering to build dynamic user interfaces. |

| CO  | Action Verb | Knowledge Statement   | Condition                  | Criteria  | Blooms level |
|-----|-------------|---|----------------------------|---|--------------|
| CO1 | Apply       | the HTML and CSS concepts   |                            | to design structured and visually attractive web pages          | L3           |
| CO2 | Analyze     | the JavaScript and ES6 features                                   |                            | to create interactive and asynchronous client-side applications | L4           |
| CO3 | Apply       | the Node.js and Express.js  | in server-side development |   | L3           |
| CO4 | Analyze     | the SQL and NoSQL databases                                       |                            | to select suitable storage solutions for applications           | L4           |
| CO5 | Apply       | the React components, state management, and conditional rendering | in frontend development    |   | L3           |

**List of Programs:**

**Module 1: Web Development Fundamentals**

Fundamentals of Web Design, Webpage and Website, Web application HTML Typography, Images, Tables, Lists, Hyperlinks etc. CSS Syntax and usage, CSS Selectors, CSS on body, CSS on Text, CSS on Links, CSS on Tables, CSS on Lists, CSS on Forms, CSS on Images, CSS on DIV, W3.CSS Framework

**List of Programs:**

- **HTML & CSS Basics** – Create a personal portfolio webpage using HTML (headings, lists, tables, hyperlinks, forms) and style it with CSS selectors.
- **Responsive Layout** – Develop a responsive webpage using DIV, CSS box model, and W3.CSS framework.
- **Styled Components** – Design a webpage for a college event with images, tables, and styled navigation menu using CSS.

**Module 2: JavaScript and ECMA Script 6**

JavaScript Fundamentals - Grammar and types, Control flow and error handling - Loops, Function - Objects, Arrays, Promises - ES6 Let and const, Template literals - Arrow Function, Default parameter, Async Await.

**List of Programs:**

- **JavaScript Fundamentals** – Build a simple calculator app using functions, loops, and control flow.
- **Array & Object Manipulation** – Write a program using ES6 features (let/const, arrow functions, template literals) to manage student records.
- **Async Programming** – Create a webpage that fetches and displays random user data from a public API using Promises and Async/Await.
- AI-Powered Content Generator (HTML + CSS + JavaScript)

### Module 3: Node.js

overview, Node.js - basics and setup - Node.js console, Node.js command utilities - Node.js modules, concepts - Node.js events, database access - Node.js with Express.js, Express.js Request/Response - Express.js Get, Express.js Post - Express.js Routing, Express.js Cookies - Express.js File Upload, Middleware - Express.js Scaffolding, Template

#### List of Programs:

- **Node.js Basics** – Write a Node.js script to create a local server and display “Hello World” in the browser.
- **Express.js Routing** – Build a REST API with Express.js that handles GET and POST requests for a student information system.
- **File Handling** – Develop a Node.js application to upload, read, and display a text/JSON file using Express middleware.
- AI-Enhanced Chatbot (Node.js + Express + AI API)

### Module 4: MySQL and MongoDB

MySQL Concepts - Create, Read, Update, Delete Operation - SQL and NoSQL concepts - Create and manage MongoDB - Migration of data into MongoDB - MongoDB with NodeJS - Services offered by MongoDB

#### List of Programs:

- **MySQL CRUD** – Create a MySQL database for employee records and perform Create, Read, Update, Delete (CRUD) operations.
- **MongoDB CRUD with Node.js** – Build a Node.js application that connects to MongoDB and manages student data.
- **Migration Project** – Write a script to migrate data from MySQL to MongoDB and display it through a Node.js API.
- AI-Driven Database Analyzer (Node.js + MySQL/MongoDB + AI)

### Module 5: React JS

ReactJS introduction and overview - ReactJS installation and environment setup - Introducing JSX, Rendering Elements - Components and Props - State and Lifecycle - Handling Events - Conditional Rendering - Lists and Keys, Forms - Lifting State Up

#### List of Programs:

- **React Components** – Build a React app to display a list of courses using functional components and props.
- **State & Events** – Create a counter and a form component in React using useState and event handling.
- **Conditional Rendering & Lists** – Develop a React to-do list application with add/delete functionality and conditional rendering of completed tasks.
- React AI Assistant (React + AI API)

#### Textbooks:

1. **Alex Banks, Eve Porcello** – *Learning React: Modern Patterns for Developing React Apps*, O’Reilly.
2. **StoyanStefanov** – *React Up & Running: Building Web Applications*, O’Reilly.
3. **Mario Casciaro, Luciano Mammino** – *Node.js Design Patterns*, Packt.
4. **Syed M.M. Iravani** – *Learning Web Design: A Beginner’s Guide to HTML, CSS, JavaScript, and Web Graphics*, O’Reilly.

#### Reference Books:

1. **Robin Wieruch** – *The Road to React*, Leanpub.
2. **Carl Rippon** – *React 18 Design Patterns and Best Practices*, Packt.
3. **KirupaChinnathambi** – *Learning React: A Hands-On Guide to Building Web Applications*, Addison-Wesley.
4. **Ethan Brown** – *Web Development with Node and Express: Leveraging the JavaScript Stack*, O’Reilly.
5. **Kristina Chodorow** – *MongoDB: The Definitive Guide*, O’Reilly.
6. **Ben Forta** – *SQL in 10 Minutes, Sams Teach Yourself*, Sams Publishing.

**Pre-Requisites**

-

**Course Objectives:**

1. To equip students with the fundamentals of academic English for research paper writing.
2. To develop students' advanced reading skills for analyzing and evaluating research articles.
3. To refine students' grammar and language skills for clarity and precision in research writing.
4. To master the skills of revising, editing, and proofreading research papers.
5. To familiarize students with the role of technology and AI in research writing, including digital literacy and ethical considerations..

**Course Outcomes (CO):** Student will be able to

|            |   |
|------------|---|
| <b>CO1</b> | <b>Understand</b> the key language aspects and structural elements of academic writing in research papers.          |
| <b>CO2</b> | <b>Apply</b> note-making techniques to organize information from academic and research texts.                       |
| <b>CO3</b> | <b>Apply</b> correct use of voice, subject–verb agreement, and modifiers to improve sentence accuracy               |
| <b>CO4</b> | <b>Apply</b> editing strategies to improve clarity, coherence, structure, grammar, and spelling in academic writing |
| <b>CO5</b> | <b>Analyze</b> plagiarism, ethical issues, and fair-use practices using digital tools and awareness strategies.     |

| CO  | Action Verb | Knowledge Statement  | Condition           | Criteria                         | Blooms Level |
|-----|-------------|--|---------------------|----------------------------------|--------------|
| CO1 | Understand  | the Yoga foundations and benefits  | —                   | —                                | L2           |
| CO2 | Apply       | The key language aspects and structural elements of academic writing                     | in research papers  |                                  | L2           |

**Pre-Requisites**

-

**Course Objectives:**

1. To enable the students to understand the fundamental concepts of disasters, hazards, their factors, and significance with special reference to India.
2. To prepare them to classify and analyze different types of natural and man-made disasters, their causes, magnitude, and impacts.
3. To foster them develop understanding of disaster preparedness, monitoring systems, and the role of government, community, and media.
4. To equip them in learning risk assessment techniques, disaster risk reduction strategies, and the importance of global and national cooperation.
5. To foster their ability to think critically and respond to disasters and design effective mitigation measures (structural and non-structural) with a focus on emerging trends and Indian disaster management programs.

**Course Outcomes (CO):** Student will be able to

|            |   |
|------------|---|
| <b>CO1</b> | <b>Understand</b> the hazards and disasters, their classifications based on type and nature and their impacts on people |
| <b>CO2</b> | <b>Understand</b> the map disaster-prone areas in India and epidemiological consequences of disasters.                  |
| <b>CO3</b> | <b>Understand</b> the disaster preparedness through monitoring and risk evaluation                                      |
| <b>CO4</b> | <b>Understand</b> the disaster risk, its reduction, assessment techniques, global cooperation and survival Strategies   |
| <b>CO5</b> | <b>Understand</b> the disaster mitigation concepts, strategies, trends and related programs in India                    |

| CO  | Action Verb       | Knowledge Statement   | Condition                              | Criteria   | Blooms Level |
|-----|-------------------|---|--|--|--------------|
| CO1 | <b>Understand</b> | Hazards and disasters, their Classifications  |  | Based on type and nature and their impacts on people | L2           |
| CO2 | <b>Understand</b> | Map disaster-prone areas in India   |  | Epidemiological consequences of disasters            | L2           |

|-------------|------------|--|---|---|---|---|
| 25DAC9902   | I-I        | <b>Essence of Indian Traditional Knowledge</b> | 2 | 0 | 0 | 0 |

**Pre-Requisites**

-

**Course Objectives:**

1. To facilitate the students with the concepts of Indian traditional knowledge and to make them understand the importance of roots of knowledge system.
2. To make them understand the need for protecting traditional knowledge and its significance in the global economy.
3. To make them understand the legal frame work and policies related to traditional knowledge protection.
4. To enable them to understand the relationship between traditional knowledge and intellectual property rights.
5. To make them explore the applications of traditional knowledge in different sectors, such as engineering, medicine, agriculture, and biotechnology.

**Course Outcomes (CO):** Student will be able to

|            |  |
|------------|--|
| <b>CO1</b> | <b>Understand</b> the concept of traditional knowledge, its nature, characteristics, and scope   |
| <b>CO2</b> | <b>Understand</b> the need for protecting traditional knowledge and its significance in the global economy                               |
| <b>CO3</b> | <b>Analyze</b> the legal framework and policies related to traditional knowledge protection  |
| <b>CO4</b> | <b>Apply</b> traditional knowledge in different sectors, such as engineering, medicine, agriculture, and biotechnology                   |
| <b>CO5</b> | <b>Analyze</b> the relationship between traditional knowledge and intellectual property rights, including patents and non-IPR mechanisms |

| CO  | Action Verb | Knowledge Statement   | Condition   | Criteria              | Blooms Level |
|-----|-------------|---|---|-----------------------|--------------|
| CO1 | Understand  | The concept of traditional knowledge, its nature, characteristics, and scope  |   |                       | L2           |
| CO2 | Understand  | The need for protecting traditional knowledge and its significance  |   | In the global economy | L2           |
| CO3 | Analyze     | The legal framework and policies  | Related to traditional knowledge protection                   |                       | L4           |
| CO4 | Apply       | Traditional knowledge in different sectors  | Such as engineering, medicine, agriculture, and biotechnology |                       | L3           |
| CO5 | Analyze     | the relationship between traditional knowledge and intellectual property rights, including patents and non-IPR mechanisms |   |                       | L4           |

|  |  |       |
|--|--|-------|
| <b>UNIT – I</b>  |  | 9 Hrs |
| Introduction to traditional knowledge - Definition, Nature and characteristics, scope and importance - Kinds of traditional knowledge - Physical and social contexts in which traditional knowledge develop - Historical impact of social change on traditional knowledge systems - Indigenous Knowledge (IK) – Characteristics - traditional knowledge vis-à-vis indigenous knowledge -Traditional knowledge Vs western knowledge, traditional knowledge vis-à-vis formal knowledge |  |       |
| <b>UNIT – II</b>   |  | 9 Hrs |
| Protection of traditional knowledge- Need for protecting traditional knowledge - Significance of TK Protection - Value of TK in global economy - Role of Government to harness TK.   |  |       |
| <b>UNIT – III</b>  |  | 9 Hrs |
| Legal frame work and TK - A)The Scheduled Tribes and Other Traditional Forest Dwellers (Recognition of Forest Rights) Act, 2006 - Plant Varieties Protection and Farmer's Rights Act, 2001 (PPVFR Act) – B)The Biological Diversity Act 2002 and Rules 2004 - the protection of traditional knowledge bill, 2016 - Geographical Indicators Act 2003.   |  |       |
| <b>UNIT – IV</b>   |  | 9 Hrs |
| Traditional knowledge and Intellectual property - Systems of traditional knowledge protection - Legal concepts for the protection of traditional knowledge - Certain non-IPR mechanisms of traditional knowledge protection - Patents and traditional knowledge - Strategies to increase protection of traditional knowledge -Global legal FORA for increasing protection of Indian Traditional Knowledge.   |  |       |

|  |       |
|--|-------|
| <b>UNIT – V</b>  | 9 Hrs |
| Traditional knowledge in different sectors - Traditional knowledge and Engineering - Traditional medicine system - TK and Biotechnology - TK in Agriculture - Traditional societies depend on it for their food and healthcare needs - Importance of conservation and sustainable development of environment - Management of biodiversity, Food security of the country and protection of TK   |       |

| <b>CO1</b>   | <b>Understand</b> the fundamentals of blockchain, blockchain types, consensus mechanisms, and cryptocurrencies.         |
| <b>CO2</b>   | <b>Apply</b> the public blockchain systems and smart contract concepts for decentralized applications.                  |
| <b>CO3</b>   | <b>Analyze</b> the private blockchain systems, consortium blockchains, Hyperledger, Ripple, Corda, and ICO mechanisms.  |
| <b>CO4</b>   | <b>Analyze</b> the blockchain security, privacy challenges, performance issues, and major industry applications.        |
| <b>CO5</b>   | <b>Apply</b> the blockchain-based solutions using suitable platforms for real-world blockchain application development. |

| CO  | Action Verb | Knowledge Statement  | Condition   | Criteria | Blooms Level |
|-----|-------------|--|---|----------|--------------|
| CO1 | Understand  | the Fundamentals of blockchain, blockchain types, consensus mechanisms, and cryptocurrencies |   |          | L2           |
| CO2 | Apply       | Public blockchain systems and the smart contracts  | Given a decentralized application   |          | L3           |
| CO3 | Analyze     | the Private blockchain systems, consortium models, Hyperledger, Ripple, Corda, ICO           |   |          | L4           |
| CO4 | Analyze     | the Blockchain security, privacy issues, performance challenges, industry use-cases          |   |          | L4           |
| CO5 | Apply       | the blockchain-based solutions   | using suitable platforms for real-world blockchain application development. |          | L3           |

s

|  |       |
|--|-------|
| <b>UNIT – I</b>  | 8 Hrs |
| Fundamentals of Blockchain: Introduction, Origin of Blockchain, Blockchain Solution, Components of Blockchain, Block in a Blockchain, The Technology and the Future. Blockchain Types and Consensus Mechanism: Introduction, Decentralization and Distribution, Types of Blockchain, Consensus Protocol. Cryptocurrency – Bitcoin, Altcoin and Token: Introduction, Bitcoin and the Cryptocurrency, Cryptocurrency Basics, Types of Cryptocurrencies, Cryptocurrency Usage.  |       |
| <b>UNIT – II</b>   | 9 Hrs |
| Public Blockchain System: Introduction, Public Blockchain, Popular Public Blockchains, The Bitcoin Blockchain, Ethereum Blockchain. Smart Contracts: Introduction, Smart Contract, Characteristics of a Smart Contract, Types of Smart Contracts, Types of Oracles, Smart Contracts in Ethereum, Smart Contracts in Industry.  |       |
| <b>UNIT – III</b>  | 9 Hrs |
| Private Blockchain System: Introduction, Key Characteristics of Private Blockchain, Why We Need Private Blockchain, Private Blockchain Examples, Private Blockchain and Open Source, E- commerce Site Example, Various Commands (Instructions) in E-commerce Blockchain, Smart Contract in Private Environment, State Machine, Different Algorithms of Permissioned Blockchain, Byzantine Fault, Multichain.<br>Consortium Blockchain: Introduction, Key Characteristics of Consortium Blockchain, Why We Need Consortium Blockchain, Hyperledger Platform, Overview of Ripple, Overview of Corda. Initial Coin Offering: Introduction, Blockchain Fundraising Methods, Launching an ICO, Investing in an ICO, Pros and Cons of Initial Coin Offering, Successful Initial Coin Offerings, Evolution of ICO, ICO Platforms. |       |
| <b>UNIT – IV</b>   | 8 Hrs |

Security in Blockchain: Introduction, Security Aspects in Bitcoin, Security and Privacy Challenges of Blockchain in General, Performance and Scalability, Identity Management and Authentication, Regulatory Compliance and Assurance, Safeguarding Blockchain Smart Contract (DApp), Security Aspects in Hyperledger Fabric.  
 Applications of Blockchain: Introduction, Blockchain in Banking and Finance, Blockchain in Education, Blockchain in Energy, Blockchain in Healthcare, Blockchain in Real-estate, Blockchain In Supply Chain, The Blockchain and IoT. Limitations and Challenges of Blockchain.

|                 |       |
|-----------------|-------|
| <b>UNIT – V</b> | 9 Hrs |
|-----------------|-------|

Blockchain Case Studies: Case Study 1 – Retail, Case Study 2 – Banking and Financial Services, Case Study 3 – Healthcare, Case Study 4 – Energy and Utilities.

Blockchain Platform using Python: Introduction, Learn How to Use Python Online Editor, Basic Programming Using Python, Python Packages for Blockchain.

Blockchain platform using Hyperledger Fabric: Introduction, Components of Hyperledger Fabric Network, Chain codes from Developer.ibm.com, Blockchain Application Using Fabric Java SDK.

**Textbooks:**

1. “Blockchain Technology”, Chandramouli Subramanian, Asha A.George, Abhilasj K A and MeenaKarthikeyan , Universities Press.

**Reference Books:**

1. Michael Juntao Yuan, Building Blockchain Apps, Pearson, India.
2. Blockchain Blueprint for Economy, Melanie Swan, SPD O'reilly.
3. Blockchain for Business, Jai Singh Arun, Jerry Cuomo, Nitin Gaur, Pearson.

**Pre-Requisites**      **ADVANCED COMPUTER NETWORKS**

- Course Objectives:**
- To introduce fundamental data-link layer protocols such as Ethernet, Token Ring, and IEEE 802.11, and to provide understanding of wireless and mobile networking concepts including Mobile IP, WMNs, and routing mechanisms.
  - To provide knowledge of transport and application layer protocols, including TCP, UDP, congestion control, mobile transport protocols, and the principles of network applications in LAN and WAN environments.
  - To enable students to understand and implement application-layer services, such as HTTP, FTP, Email, DNS, P2P communication, and to develop basic socket programming skills using TCP and UDP.
  - To familiarize learners with wireless and mobile network technologies, including CDMA, Wi-Fi (802.11), cellular access technologies, and mobility management principles.
  - To develop the ability to understand multimedia networking technologies, including streaming video, VoIP, and protocols designed for real-time end-to-end communication.

**Course Outcomes (CO):** Student will be able to

|            |  |
|------------|--|
| <b>CO1</b> | <b>Understand</b> the holistic functioning and layered structure of computer networking fundamentals clearly.          |
| <b>CO2</b> | <b>Understand</b> the network protocols and their practical applications in diverse real-world networking scenarios.   |
| <b>CO3</b> | <b>Apply</b> the packet-forwarding concepts by designing and accurately simulating routing mechanisms in networks.     |
| <b>CO4</b> | <b>Analyze</b> the wireless and mobile network architectures with detailed and efficient mobility-management concepts. |
| <b>CO5</b> | <b>Analyze</b> the multimedia networking protocols & real-time communication mechanisms for overall performance.       |

| <b>CO</b>  | <b>Action Verb</b> | <b>Knowledge Statement</b>  | <b>Condition</b> | <b>Criteria</b>               | <b>Blooms Level</b> |
|------------|--------------------|---|------------------|-------------------------------|---------------------|
| <b>CO1</b> | Understand         | the holistic functioning, layered structure of computer networking              |                  |                               | L2                  |
| <b>CO2</b> | Understand         | the computer network protocols and their applications                           |                  |                               | L2                  |
| <b>CO3</b> | Apply              | the packet forwarding and routing   |                  | simulating routing mechanisms | L3                  |
| <b>CO4</b> | Analyze            | the wireless and mobile network architectures with mobility-management concepts |                  |                               | L4                  |
| <b>CO5</b> | Analyze            | the multimedia networking protocols   |                  | Evaluate performance          | L4                  |

|                 |       |
|-----------------|-------|
| <b>UNIT – I</b> | 9 Hrs |
|-----------------|-------|

Data-link protocols: Ethernet, Token Ring and Wireless (802.11). Wireless Networks and Mobile IP: Infrastructure of Wireless Networks, Wireless LAN Technologies, IEEE 802.11 Wireless Standard, Cellular Networks, Mobile IP, Wireless Mesh Networks (WMNs), Multiple access schemes Routing and Internetworking: Network-Layer Routing, Least-Cost-Path algorithms, Non-Least-Cost-Path algorithms, Intra-domain Routing Protocols, Inter-domain Routing Protocols, Congestion Control at Network Layer.

|                  |       |
|------------------|-------|
| <b>UNIT – II</b> | 9 Hrs |
|------------------|-------|

Transport and Application Layer Protocols: Client-Server and Peer-To-Peer Application Communication, Protocols on the transport layer, reliable communication. Routing packets through a LAN and WAN. Transport Layer, Transmission Control Protocol (TCP), User Datagram Protocol (UDP), Mobile Transport Protocols, TCP Congestion Control. Principles of Network Applications.

|                   |       |
|-------------------|-------|
| <b>UNIT – III</b> | 9 Hrs |
|-------------------|-------|

The Web and HTTP, File Transfer: FTP, Electronic Mail in the Internet, Domain Name System (DNS), P2P File Sharing, Socket Programming with TCP and UDP, building a Simple Web Server Creating simulated networks and passing packets through them using different routing techniques. Installing and using network monitoring tools..

|                  |       |
|------------------|-------|
| <b>UNIT – IV</b> | 9 Hrs |
|------------------|-------|

Wireless and Mobile Networks: Introduction, Wireless links and Network Characteristics - CDMA, Wifi: 802.11 Wireless LANS, Cellular internet access, Mobility management: Principles

|                 |       |
|-----------------|-------|
| <b>UNIT – V</b> | 9 Hrs |
|-----------------|-------|

Multimedia networking: Multimedia networking applications, streaming stored video, Voice-over-IP, Protocols for real-time conversational applications.

**Textbooks:**

|                 |  |       |
|-----------------|--|-------|
| <b>UNIT – I</b> | <b>Foundations of AI and Generative Models</b> | 9 Hrs |
|-----------------|--|-------|

Introduction and historical evolution to Artificial Intelligence (AI), Machine Learning (ML), Natural Language Processing (NLP) and Deep Learning (DL), Structure of Artificial Neural Networks (ANNs), Mathematical and computational foundations of generative modeling, Overview of generative models and their applications across various domains; Importance of Generative AI in modern applications, Transfer learning and in advancing Generative AI.

|                  |  |       |
|------------------|--|-------|
| <b>UNIT – II</b> | <b>Advanced Neural Architectures for Generative AI</b> | 9 Hrs |
|------------------|--|-------|

Variational Autoencoders (VAEs): principles and applications, Generative Adversarial Networks (GANs): architecture and working principles; Transformer architecture and attention mechanisms (in detail); Long Short-Term Memory Networks (LSTMs) and the limitations of traditional RNNs/LSTMs, Advanced Transformer architectures and techniques, Pre-training and transfer learning strategies for generative models.

|                   |   |       |
|-------------------|---|-------|
| <b>UNIT – III</b> | <b>Large Language Models and Prompt Engineering</b> | 9 Hrs |
|-------------------|---|-------|

Overview of Large Language Models (LLMs), GPT architecture, variants, and working principles, Prétraining and fine-tuning GPT models for applications (e.g., chatbots, text generation), Case study: GPT-based customer support chatbot, BERT architecture, pre-training objectives, and fine-tuning, Prompt Engineering: Designing effective prompts, controlling model behavior, and improving output quality, Fine-tuning language models for creative writing and chatbot development.

|                  |   |       |
|------------------|---|-------|
| <b>UNIT – IV</b> | <b>Multi-Agent Systems and Generative AI Applications</b> | 9 Hrs |
|------------------|---|-------|

Introduction to Multi-Agent Systems (MAS), Types of agents: reactive, deliberative, hybrid, and learning agents, Multi-agent collaboration and orchestration for generative tasks, Use cases: autonomous research assistants, cooperative creative generation, distributed problem-solving, Frameworks and tools: AutoGen, CrewAI, Hugging GPT for LLM-powered multi-agent systems, Generative AI applications: Art, Creativity, Image/Video generation, Music composition, Healthcare, Finance, Real-world case studies and deployment challenges

|                 |       |
|-----------------|-------|
| <b>UNIT – V</b> | 9 Hrs |
|-----------------|-------|

Frameworks, Multimodal Applications, and Ethics LangChain framework: components and LLM application development, Retrieval-Augmented Generation (RAG), Embeddings, Indexing networks, and Vector databases, Generative AI across modalities: Text, Code, Image, and Video generation, Image and Video generation using GANs and VAEs, Multimodal Generative AI: integration and training strategies, Ethical considerations: bias, fairness, trust, and responsible AI deployment, Social and legal implications of Generative AI, Risk mitigation strategies and real-world ethical case studies

|-----------------------|--------------------------|
| <b>Pre-Requisites</b> | <b>DIGITAL FORENSICS</b> |
|-----------------------|--------------------------|

- Course Objectives:**
- To provide foundational knowledge of digital forensics science, including computer forensics, cyber criminalistics, and investigative processes.
  - To familiarize students with cybercrime scene analysis, including methods for search and seizure of electronic evidence and required court documents.
  - To develop the ability to manage and present digital evidence by understanding the forensic mindset, workload of law enforcement, and legal principles such as probable cause.
  - To equip students with skills to conduct computer and network forensic investigations, including case preparation, investigation procedures, and preservation of network data.
  - To introduce students to mobile forensics techniques, tools, and legal aspects of digital forensics, including IT Act 2000 and its amendments, and recent trends in electronic evidence handling.

**The course aims to:**

**Course Outcomes (CO):** Student will be able to

|            |   |
|------------|---|
| <b>CO1</b> | <b>Understand</b> the relevant legislation, IT Acts, and codes of ethics related to digital forensics.                        |
| <b>CO2</b> | <b>Understand</b> the computer forensics processes, digital detective methods, and various forensic policies and procedures.  |
| <b>CO3</b> | <b>Analyze</b> the e-discovery procedures, digital evidence guidelines, forensic tools, and investigation environments.       |
| <b>CO4</b> | <b>Apply</b> the techniques of email forensics, web forensics, and network forensics to extract and analyze digital evidence. |
| <b>CO5</b> | <b>Apply</b> the mobile forensics techniques, tools & legal procedures to acquire, analyze & present mobile digital evidence. |

| CO  | Action Verb | Knowledge Statement  | Condition   | Criteria | Blooms Level |
|-----|-------------|--|---|----------|--------------|
| CO1 | Understand  | Relevant legislation, IT Acts, and codes of ethics related to digital forensics                      |   |          | L2           |
| CO2 | Understand  | Computer forensics processes, digital detective methods, and various forensic policies and procedure |   |          | L2           |
| CO3 | Analyze     | E-discovery procedures, digital evidence guidelines, forensic tools, and investigation environments  |   |          | L4           |
| CO4 | Apply       | Techniques of email forensics, web forensics, and network forensics                                  | To extract and analyze digital evidence               |          | L3           |
| CO5 | Apply       | mobile forensics techniques, tools, and legal procedures   | To acquire, analyze & present mobile digital evidence |          | L3           |

|  |  |       |
|--|--|-------|
| <b>UNIT – I</b>  |  | 9 Hrs |
| Digital Forensics Science: Forensics science, computer forensics, and digital forensics. Computer Crime: Criminalistics as it relates to the investigative process, analysis of cyber criminalistics area, holistic approach to cyber-forensics  |  |       |
| <b>UNIT – II</b>   |  | 9 Hrs |
| Cyber Crime Scene Analysis: Discuss the various court orders etc., methods to search and seizure electronic evidence, retrieved and un-retrieved communications, Discuss the importance of understanding what court documents would be required for a criminal investigation.  |  |       |
| <b>UNIT – III</b>  |  | 9 Hrs |
| Evidence Management & Presentation: Create and manage shared folders using operating system, importance of the forensic mindset, define the workload of law enforcement, Explain what the normal case would look like, Define who should be notified of a crime, parts of gathering evidence, Define and apply probable cause. |  |       |
| <b>UNIT – IV</b>   |  | 9 Hrs |
| Computer Forensics: Prepare a case, Begin an investigation, Understand computer forensics workstations and software, Conduct an investigation, Complete a case, Critique a case, Network Forensics: open-source security tools for network forensic analysis, requirements for preservation of network data                    |  |       |
| <b>UNIT – V</b>  |  | 9 Hrs |
| Mobile Forensics: mobile forensics techniques, mobile forensics tools. Legal Aspects of Digital Forensics: IT Act 2000, amendment of IT Act 2008. Recent trends in mobile forensic technique and methods to search and seizure electronic evidence   |  |       |

| <b>Pre-Requisites</b> | <b>Software Engineering</b> |
|-----------------------|-----------------------------|

**Course Objectives:**

- To familiarize students with various software process models and project management practices for planning and managing software development.
- To enable students to gather, document, and model software requirements using industry-standard requirement engineering and UML techniques.
- To develop students' ability to design modular, reusable, and maintainable software systems using object-oriented and component-based approaches.
- To provide hands-on experience in applying software testing, maintenance, and reengineering strategies to ensure software quality and continuous improvement.
- To train students in the use of modern software engineering tools, DevOps practices, and software analytics to improve development efficiency and quality assurance.

**Course Outcomes (CO):** Student will be able to

|     |   |
|-----|---|
| CO1 | <b>Analyze</b> the software process models & project management techniques to plan & manage software development effectively. |
| CO2 | <b>Analyze</b> the requirements elicitation, documentation, and UML modeling techniques for software systems.                 |
| CO3 | <b>Analyze</b> the software testing strategies, techniques & reengineering practices to ensure overall software quality       |
| CO4 | <b>Apply</b> the software testing, maintenance, and reengineering practices for overall quality.                              |
| CO5 | <b>Apply</b> the modern tools like version control, DevOps, metrics, and Artificial intelligence - based analysis.            |

| CO  | Action Verb    | Knowledge Statement  | Condition                             | Criteria                                       | Blooms Level |

| CO4 | <b>Apply</b>   | Software testing, maintenance, and reengineering practices                                     | For overall quality                   |  | L3           |
| CO5 | <b>Apply</b>   | Modern tools like version control, DevOps, metrics, and Artificial Intelligence-based analysis |                                       |  | L3           |

**List of Programs:**

- Program 1: Comparative Study of Process Models (CO1)**  
Implement a simple project using Waterfall and Incremental models; compare effort, defects, and time taken.
- Program 2: Agile Development Simulation (CO1)**  
Develop a small software system using Scrum methodology with sprints, product backlog, sprint backlog, and daily scrums.
- Program 3: Project Estimation and Scheduling (CO3)**  
Perform Function Point Analysis (FPA) or Use Case Points (UCP) to estimate size and effort, then prepare a Gantt chart and PERT chart.
- Program 4: Risk Analysis in Software Projects (CO4)**  
Conduct risk identification, qualitative/quantitative assessment, and develop a risk mitigation plan for a given case study.
- Program 5: Requirement Elicitation and SRS Document (CO4)**  
Conduct requirement gathering for a mini-project and prepare a Software Requirement Specification (SRS) document.
- Program 6: UML Modeling (Scenario-based & Structural) (CO3)**  
Create Use Case diagrams, Activity diagrams, and Sequence diagrams for a given problem domain.
- Program 7: UML Modeling (Class & Behavioral) (CO2)**  
Create Class diagrams, State machine diagrams, and Component diagrams to represent system architecture.
- Program 8: Object-Oriented Design Using UML (CO2)**  
Design a software module using OO principles (encapsulation, inheritance, polymorphism) and illustrate with UML diagrams.
- Program 9: Design Patterns Implementation (CO4)**

Implement at least three design patterns (e.g., Singleton, Factory, Observer) in Java/Python.

**Program 10: Reuse-Oriented Software Engineering (CO5)**

Use existing open-source libraries/frameworks to develop a component-based application (e.g., web app using Django/Flask).

**Program 11: Black-box and White-box Testing(CO3)**

Perform equivalence partitioning and boundary value analysis (black-box) and basis path testing (white-box) for a given program.

**Program 12: Software Maintenance and Reengineering(CO4)**

Take an existing open-source project (small module), analyze it, and perform refactoring/reengineering for improvement.

**Program 13: Version Control and DevOps Pipeline (CO5)**

Use Git & GitHub/GitLab for version control and demonstrate CI/CD pipeline setup with Jenkins/GitHub Actions.

**Program 14: Software Metrics and AI in SE (CO5)**

Compute software metrics (complexity, coupling, cohesion) for a given project and explore an AI tool (e.g., GitHub Copilot, SonarQube) for software quality analysis.

**Textbooks:**

**List of Programs:**

1. Write a program to implement RDBMS - Cursors, Triggers (CO2)
2. Write a Program to implement Range Partitioning sort. (CO2)
3. Write a program to implement parallel hash join (CO1)
4. Write a program to implement parallel nested join loop (CO1)
5. Write a program to implement parallelize duplicate elimination by partitioning the tuples (CO3)
6. Perform data fragmentation of distributed data(Horizontal, Vertical, Hybrid fragmentation) (CO3)
7. Implement deadlock detection in distributed databases (CO4)
8. Implement Semi Join algorithm. (CO3)
9. DataCube Implementation - Aggregation (CO3)
10. Perform data Integration - Extraction, Transformation, Loading (CO3)
11. Implement any one classifier (CO4)
12. Implement vector space models for Text corpus (CO4)
13. Demonstrate type inheritance, table inheritance in object based databases (CO4)
14. Write queries in XQueries on DTD (CO5)
15. Write queries in SQL/XML to convert University data - XML Schema (CO5)

| 1. provide foundational understanding of the transition from classical to quantum physics and the nature of quantum states.       |
| 2. To introduce students to qubits, quantum systems, and their conceptual and philosophical importance.                           |
| 3. To enable students to analyze quantum computer requirements, hardware platforms, software roles, and technological challenges. |
| 4. To examine quantum information, communication, and computing theories and evaluate their future potential.                     |
| 5. To familiarize students with quantum applications, current industry use cases, challenges, and opportunities across domains.   |

**Course Outcomes (CO):** Student will be able to

|            |  |
|------------|--|
| <b>CO1</b> | <b>Understand</b> the transition from classical physics to quantum physics, quantum states, superposition, and key principles.       |
| <b>CO2</b> | <b>Understand</b> qubits, quantum systems, entanglement, and their philosophical and theoretical significance.                       |
| <b>CO3</b> | <b>Analyze</b> quantum computer requirements, system fragility, hardware platforms, software components, and operational challenges. |
| <b>CO4</b> | <b>Analyze</b> quantum information processing, quantum communication, quantum computing principles & future potential.               |
| <b>CO5</b> | <b>Apply</b> quantum computing applications, industry use cases, emerging challenges, and practical opportunities.                   |

| CO  | Action Verb | Knowledge Statement  | Condition | Criteria   | Blooms Level |
|-----|-------------|--|-----------|--|--------------|
| CO1 | Understand  | Transition from classical to quantum physics and quantum states                  |           |  | L2           |
| CO2 | Understand  | Qubits, quantum systems, and their significance                                  |           | Explains qubits and quantum system significance        | L2           |
| CO3 | Analyze     | Quantum computer requirements, fragility, hardware platforms, and software roles |           |  | L4           |
| CO4 | Analyze     | Quantum information, communication, computing, and future potential              |           | Assesses information and computing potential correctly | L4           |
| CO5 | Apply       | Quantum applications, industry cases, challenges, and opportunities              |           |  | L3           |

|                 |  |       |
|-----------------|--|-------|
| <b>UNIT – I</b> | <b>Introduction to Quantum Theory and Technologies</b> | 9 Hrs |
|-----------------|--|-------|

The transition from classical to quantum physics, Fundamental principles explained conceptually: Superposition, Entanglement, Uncertainty Principle, Wave-particle duality, Classical vs Quantum mechanics – theoretical comparison, Quantum states and measurement: nature of observation, Overview of quantum systems: electrons, photons, atoms, The concept of quantization: discrete energy levels, Why quantum? Strategic, scientific, and technological significance, A snapshot of quantum technologies: Computing, Communication, and Sensing, National and global quantum missions: India’s Quantum Mission, EU, USA, China

|                  |   |       |
|------------------|---|-------|
| <b>UNIT – II</b> | <b>Theoretical Structure of Quantum Information Systems</b> | 9 Hrs |
|------------------|---|-------|

What is a qubit? Conceptual understanding using spin and polarization, Comparison: classical bits vs quantum bits, Quantum systems: trapped ions, superconducting circuits, photons (non-engineering view), Quantum coherence and decoherence – intuitive explanation, Theoretical concepts: Hilbert spaces, quantum states, operators – only interpreted in abstract, The role of entanglement and non-locality in systems, Quantum information vs classical information: principles and differences, Philosophical implications: randomness, determinism, and observer role

|                   |  |       |
|-------------------|--|-------|
| <b>UNIT – III</b> | <b>Building a Quantum Computer – Theoretical Challenges and Requirements</b> | 9 Hrs |
|-------------------|--|-------|

What is required to build a quantum computer (conceptual overview)?, Fragility of quantum systems: decoherence, noise, and control, Conditions for a functional quantum system: Isolation, Error management, Scalability, Stability, Theoretical barriers: Why maintaining entanglement is difficult, Error correction as a theoretical necessity, Quantum hardware platforms (brief conceptual comparison), Superconducting circuits, Trapped ions, Photonics, Vision vs reality: what’s working and what remains elusive, The role of quantum software in managing theoretical complexities

|                  |  |       |
|------------------|--|-------|
| <b>UNIT – IV</b> | <b>Quantum Communication and Computing – Theoretical Perspective</b> | 9 Hrs |
|------------------|--|-------|

Quantum vs Classical Information, Basics of Quantum Communication, Quantum Key Distribution (QKD), Role of Entanglement in Communication, The Idea of the Quantum Internet – Secure Global Networking, Introduction to Quantum Computing, Quantum Parallelism (Many States at Once), Classical vs Quantum Gates, Challenges: Decoherence and Error

|   |  |       |
|---|--|-------|
| Correction,Real-World Importance and Future Potential   |  |       |
| <b>UNIT – V</b>   | <b>Applications, Use Cases, and the Quantum Future</b> | 9 Hrs |
| Real-world application domains: Healthcare (drug discovery),Material science, Logistics and optimization, Quantum sensing and precision timing, Industrial case studies: IBM, Google, Microsoft, PsiQuantum,Ethical, societal, and policy considerations, Challenges to adoption: cost, skills, standardization,Emerging careers in quantum: roles, skillsets, and preparation pathways,Educational and research landscape – India's opportunity in the global quantum race |  |       |

|-----------------------|---|

|  |
|--|
| <b>Course Objectives:</b>  |
| 1. Provide conceptual understanding of business ethics, values, and professional responsibility. |
| 2. Develop awareness of ethical conduct and decision-making in corporate environments.           |
| 3. Introduce the functional domains and applications of ethics in business operations.           |
| 4. Build foundational knowledge of corporate governance mechanisms and stakeholder roles.        |
| 5. Explore corporate sector ethical theories, best practices, and real-world applications.       |

**Course Outcomes (CO):** Student will be able to

|            |   |
|------------|---|
| <b>CO1</b> | <b>Understand</b> the fundamental concepts of business ethics and values in professional practice.          |
| <b>CO2</b> | <b>Analyze</b> ethical behavior and practices followed in corporate organizations.                          |
| <b>CO3</b> | <b>Analyze</b> functional areas of business ethics and their relevance in organizational decision making.   |
| <b>CO4</b> | <b>Understand</b> the structure, mechanisms, and principles of corporate governance.                        |
| <b>CO5</b> | <b>Evaluate</b> theories and practices adopted by corporate sectors for responsible and ethical operations. |

| CO  | Action Verb | Knowledge Statement   | Condition  | Criteria  | Blooms Level |
|-----|-------------|---|--|---|--------------|
| CO1 | Understand  | Concepts of business ethics and values                        | —  | —   | L2           |
| CO2 | Analyze     | Ethical behavior and practices in corporate organizations     | Given case studies or workplace ethical dilemmas | Recommends appropriate ethical behavior                       | L4           |
| CO3 | Analyze     | Functional areas of business ethics and their relevance       | —  | Correctly identifies and categorizes ethical functional areas | L4           |
| CO4 | Understand  | Structure, mechanisms, and principles of corporate governance | —  | —   | L2           |
| CO5 | Evaluate    | Ethical theories and corporate sector practices               | Given corporate practices or strategies          | Critically evaluates suitability and ethical impact           | L5           |

|                 |       |
|-----------------|-------|
| <b>UNIT – I</b> | 9 Hrs |
|-----------------|-------|

Introduction – Concepts of ethics – Importance, Ethics and morality, Ethics and law, Ethics and ethos, Business Ethics – Meaning, scope, and benefits, Ethical theories, Values and its relevance in Management, role of Ethics in Business and Indian Value system, Various approaches to ethics- Indian examples.

|                  |       |
|------------------|-------|
| <b>UNIT – II</b> | 9 Hrs |
|------------------|-------|

Ethical Corporate Behaviour- stages of ethical behaviour, Ethical leadership with examples, Ethical Decision Making, Work ethics: nature and scope, Ethical issues at the workplace, Ethics and cultural issues, Environmental Ethics, Ethical dilemma, ethical displacement.

|                   |       |
|-------------------|-------|
| <b>UNIT – III</b> | 9 Hrs |
|-------------------|-------|

Ethics in Functional Areas: Operations, Marketing, Finance, HR & Information Technology, Recent challenges in ethics, Ethics in different countries.

|                  |       |
|------------------|-------|
| <b>UNIT – IV</b> | 9 Hrs |
|------------------|-------|

Corporate Governance – concepts, relevance and importance – emergence of corporate governance in 21st century – Corporate Governance initiatives in India and abroad. Corporate Governance failures with examples, General ethical issues and the court verdicts in the domain of business ethics, obligation to stakeholders.

|                 |       |
|-----------------|-------|
| <b>UNIT – V</b> | 9 Hrs |
|-----------------|-------|

Theories of corporate governance – models – social audit – Ethical Issues-Corruption, – whistle blowing-competition-privacy-trade secrets, corporate governance in public sector undertakings and banks, Harassment & Discrimination.

|-----------------------|---|
| <b>Pre-Requisites</b> | - |
|-----------------------|---|

|   |
|---|
| <b>Course Objectives:</b>   |
| 1. Introduce automation concepts, sensor systems, actuators, and signal conditioning.                         |
| 2. Provide knowledge of industrial robots, numerical control, and controller fundamentals.                    |
| 3. Train students to design signal conditioning and automation control schemes.                               |
| 4. Develop analytical ability to select appropriate automation components for real-world applications.        |
| 5. Enable students to integrate sensors, actuators, controllers, and logic programming in automation systems. |

|  |
|--|
| <b>Course Outcomes (CO):</b> Student will be able to |
|--|

|            |  |
|------------|--|
| <b>CO1</b> | <b>Analyze</b> the sensor systems and select an appropriate sensor based on application constraints.     |
| <b>CO2</b> | <b>Apply</b> the signal conditioning schemes based on application requirements.                          |
| <b>CO3</b> | <b>Evaluate</b> the actuator characteristics and choose a suitable actuator for industrial applications. |
| <b>CO4</b> | <b>Apply</b> the industrial robots and numerical control concepts in the context of automation.          |
| <b>CO5</b> | <b>Create</b> the automation schemes using controllers and ladder logic programming.                     |

| CO  | Action Verb | Knowledge Statement   | Condition  | Criteria  | Blooms Level |
|-----|-------------|---|--|---|--------------|
| CO1 | Analyze     | the Sensor systems and their selection based on constraints | Given an industrial application description            | Selects the most suitable sensor based on evaluation of constraints | L4           |
| CO2 | Apply       | the Signal conditioning schemes                             | Given application requirements or a block diagram      | Designs an effective signal conditioning system                     | L3           |
| CO3 | Evaluate    | the Actuator systems and their characteristics              | Given performance requirements or industrial task      | Selects the optimal actuator based on evaluation                    | L5           |
| CO4 | Apply       | the Industrial robots and numerical control concepts        | —  | —   | L3           |
| CO5 | Create      | the Automation schemes using controllers and ladder logic   | Given control requirements or functional specification | Develops a functioning automation ladder logic program              | L6           |

|   |  |       |
|---|--|-------|
| <b>UNIT – I</b>   | <b>Introduction to Industrial Automation</b>               | 9 Hrs |
| Basic Elements of an Automated System, Levels of Automation, Hardware components for Automation: Sensors, classification, Static and dynamic behaviour of sensors. Basic working principle of different sensors: Proximity sensors, Temperature sensors, flow sensors, Pressure sensors, Force sensors. Position sensors  |  |       |
| <b>UNIT – II</b>  | <b>Signal conditioning</b>                                 | 9 Hrs |
| Need for signal conditioning, Types of signal conditioning. Signal conditioning using operational amplifier-Amplifier (Inverting and Non-inverting) and Filter circuits (Basic concepts). Design of first order low pass filter. Signal conditioning for data acquisition systems, anti-aliasing filters, Analog–Digital Conversions, Analog-to-Digital Converters (ADC)-Steps in analog-to-digital conversion, Successive Approximation Method, Digital-to-Analog Converters (DAC)- Steps in digital to analog conversion, Zero-order and first order data hold circuits |  |       |
| <b>UNIT – III</b>   | <b>Actuators</b>   | 9 Hrs |
| Types of actuators- mechanical, electrical, pneumatic and hydraulic actuators. (Basic working principle), Mechanical systems for motion conversion, transmission systems, Solenoids, Electric and stepper motors control.   |  |       |
| <b>UNIT – IV</b>  | <b>Robotics and Automated Manufacturing Systems</b>        | 9 Hrs |
| Robot Anatomy and Related Attributes: Joints and Links, Common Robot Configurations, Joint Drive Systems, Sensors in Robotics (Basic concepts), Robot Control Systems, Applications of Industrial Robots- Material handling, Fundamentals of Numerical control (NC) Technology.   |  |       |
| <b>UNIT – V</b>   | <b>Discrete Control and Programmable Logic Controllers</b> | 9 Hrs |
| Discrete Process Control: Logic and Sequence control, Ladder Logic Diagrams, Programmable Logic Controllers: Components of the PLC, PLC Operating Cycle, Programming the PLC (Basic concepts only), Introduction to Distributed control system (DCS) and Supervisory Control and Data Acquisition Systems (SCADA)   |  |       |

| CO2 | Apply       | the Physical strength and flexibility                            | Given guided yogic exercises                 | Demonstrates improved strength and flexibility            | L3           |
| CO3 | Apply       | the Relaxation and concentration techniques                      | During meditation or guided sessions         | Performs techniques with improved mental focus            | L3           |
| CO4 | Apply       | the Asanas and breathing techniques for stress relief            | Given instructions or stress-relief routines | Applies techniques to relieve physical and mental tension | L3           |
| CO5 | Analyze     | the Work performance and efficiency through yoga-based lifestyle | After regular practice over a period         | Shows improved productivity and reduced stress levels     | L4           |

|                 |  |       |
|-----------------|--|-------|
| <b>UNIT – I</b> |  | 9 Hrs |
|-----------------|--|-------|

Meaning and definition of Yoga - Historical perspective of Yoga - Principles of Astanga Yoga by Patanjali.

|                  |  |       |
|------------------|--|-------|
| <b>UNIT – II</b> |  | 9 Hrs |
|------------------|--|-------|

Meaning and definition of Stress - Types of stress - Eustress and Distress. Anticipatory Anxiety and Intense Anxiety and depression. Meaning of Management- Stress Management.

|                   |  |       |
|-------------------|--|-------|
| <b>UNIT – III</b> |  | 9 Hrs |
|-------------------|--|-------|

Concept of Stress according to Yoga - Stress assessment methods - Role of Asana, Pranayama and Meditation in the management of stress.

|                  |  |       |
|------------------|--|-------|
| <b>UNIT – IV</b> |  | 9 Hrs |
|------------------|--|-------|

Asanas- (5 Asanas in each posture) - Warm up - Standing Asanas – Sitting Asanas - Prone Asanas - Supine asanas - Surya Namaskar.

|                 |  |       |
|-----------------|--|-------|
| <b>UNIT – V</b> |  | 9 Hrs |
|-----------------|--|-------|

Pranayama- Anulom and Vilom Pranayama - Nadishudhi Pranayama – Kapalabhati-Pranayama - Bhramari Pranayama - Nadanusandhana Pranayama.

Meditation techniques: Om Meditation - Cyclic meditation : Instant Relaxation technique (QRT), Quick Relaxation Technique (QRT), Deep Relaxation Technique (DRT).
